Simulink Matlab Three Phase Fault

Description. The Three-Phase Fault block implements a three-phase circuit breaker where the opening and closing times can be controlled either from an external Simulink[®] signal (external control mode), or from an internal control timer

(internal control mode). The Three-Phase Fault block uses three Breaker blocks that can be individually switched on and off to program phase-to-phase faults, phase-to-ground faults, or a combination of phase-to-phase and ground faults.

Three-Phase Fault - MATLAB & Simulink

Description. The Fault (Three-Phase) models any permutation of a single-phase, two-phase, or three-phase grounded or ungrounded fault. The block can impose both time- and event-based faults. The block can impose one or both type of faults, consecutively, at the same time, or for an overlapping time period. For a time-based or temporal

fault, specify the fault activation time using the block Fault start time parameter.

Fault Analysis of 3 phase system in Simulink - YouTube

When the fault is applied, the three currents flowing in the 2400 V windings increase from their steady state value (0.20 pu) to 1 pu and contain mainly a zero-sequence component (3 components in phase). During the fault, a DC flux is trapped in phase A, close to its value at fault application (~ -1 pu), whereas the sinusoidal fluxes in phases B and C do not exceed 1.3 pu, Therefore, transformer is operating mainly in the linear region (see Figure 2).

Three-Phase-to-Ground Fault. Change the fault type to a three-phase-to-ground fault by checking Phases A, B, and C in the Fault Breaker block. Restart the simulation. Notice that during the fault the energy dissipated in the MOV builds up faster than in the case of a line-to-ground fault.

Hello, I am using a SimPowerSystems part called Three-Phase Fault in a Simulink model which I am running on a Real-Time target. I wish to change the value of a parameter of the Three-Phase Fault block, the Fault resistance value, between runs without recompiling the model on the target. When I examine the Real-Time Target object to see the parameter list, I can't see this parameter to modify and looking at the block with the Mask Editor, the parameter attribute is not ticked as tunable.
