Design And Input Shaping Control

The advanced mechanical design is optimized utilizing FEA tools. The dynamic behaviour of the actual built scanning unit is characterized and agrees well with the FEA predicted dynamics. An input-shaping based control method is presented that compensates the main dynamics of the high-speed scanner.

A MATHEMATICAL TOOL TO DESIGN AND ANALYZE INPUT SHAPERS

Abstract: Input shaping is an open-loop control technique for reducing residual vibrations in computer-controlled machines that is implemented by convolving a sequence of impulses (an input shaper) with any desired command [1]. The timing instants and amplitudes of the impulses are determined from the natural frequency and damping ratio of a vibratory system by solving a set of constraint equations [2].
