A biuret test is a chemical assay that helps check for the presence of protein in a given sample. To confirm the presence of protein, it will rely on the changes in color. An indicator that protein is present is when the color changes to violet. Although the test is called biuret, it does not use the chemical biuret; a substance derived from urea.

The biuret reaction is a method that can be used to determine the amount of soluble protein in a solution. The biuret reagent (copper sulfate in a strong base) reacts with peptide bonds (which join amino acids to form proteins) and changes colour when it does so.
