With these stability requirements, the coordinated optimization model of control parameters $p=\{K \omega, p'\}$ can be expressed as: (18) $\max J p$ (19) s. t. $p_{\min} \leq p \leq p_{\max}$ (20) $\sum_{i=1}^N w K \omega_i P_{wi} f_0 \geq M$. This coordinated optimization model can enhance the small-signal stability while ensuring the frequency stability requirement.

A coordinated system is a multilevel system in which one distinguishes a coordinator subsystem at the highest level and the remaining subsystems at the lowest level. The control task of the coordinator is to coordinate the interaction of the subsystems at the lower level. The problems are then to formulate the concept of coordination, to construct for a distributed system and control objectives a coordinator subsystem of minimal complexity, and to develop control synthesis for coordinated ...

As illustrated in Figure 8(a), the proposed coordinated control could make the accumulation of congested region 1 closer to its optimal critical value compared to the decentralized control and the fixed signal control, but its overall accumulation state is not as good as that of other two congested regions. This is mainly due to two reasons: (i) the number of gated boundary intersections for congested region 1 is less than that of the other two congested regions; (ii) the proposed ...
