Abstract. Male reproductive development is a complex process requiring precise endocrine and genetic signals to regulate morphological changes. In this chapter, we review the genetic cues that induce male sexual differentiation from the bipotential gonad to the development of the testes and penis.

Human Reproductive and Prenatal Genetics | ScienceDirect

Males start producing sperm during puberty (PYEW bur tee), which usually begins when they are 10-16 years

of age. Sperm production occurs by meiosis in cells that line the seminiferous tubules, as shown in Figure 3. It takes 65-75 days to produce a mature sperm cell, also shown in Figure 3.

Chapter 13: The Human Reproductive System

Human Reproductive Anatomy The reproductive tissues of male and female humans develop similarly in utero until about the seventh week of gestation when a low level of the hormone testosterone is released from the gonads of the developing male. Testosterone causes the primitive gonads to differentiate into male sexual organs.
