If you look at a package Makefile (the file defining settings for building a specific package), <https://github.com/openwrt/openwrt/blob/master/package/utils/busybox/Makefile> you will notice that it states the official download link for the sources that will be compiled, a SHA256 hash to check the integrity of such download, and two version numbers (one for upstream and one for OpenWrt). On some other packages it will state git commit/timestamp or other way to identify the same source to pull ...

OpenWrt Project: Overview

OpenWrt is a highly extensible GNU/Linux distribution for embedded devices (typically wireless routers). Unlike many other distributions for routers, OpenWrt is built from the ground up to be a full-featured, easily modifiable operating system for embedded devices. In practice, this means that you can have all the features you need with none of the bloat, powered by a modern Linux kernel.
