Abstract. We study those nonlinear infinitesimal realizations of $SL(2, \mathbb{C})$ that leave invariant the quadratic function $\langle \dot{x}_\mu, \dot{x}_\mu \rangle$ of the four-velocity components of a particle. These transformations are defined as maps of a larger manifold, which includes the four-velocity space, into

itself in such a way that transformations of the $\langle \dot{x}_\mu, \dot{x}_\mu \rangle$ depend upon other functions in ...

Book Description: Spinor and Twistor Methods in Space-Time Geometry introduces the theory of twistors, and studies in detail how the theory of twistors and 2-spinors can be applied to the study of space-time. Twistors have, in recent years, attracted increasing attention as a mathematical tool and as a means of gaining new insights into the structure of physical laws.
