Solving Equations with Identity or No Solution

No Solution In Algebra

If we split the equation to its positive and negative solutions, we have: Solve the first equation. The answer to is: Solve the second equation. The answer to is: If we substitute these two solutions back to the original equation, the results are positive answers and can never be equal to negative one. The answer is no solution.

How to find out when an equation has no solution - Algebra 1

Sometimes equations have no solution. This means that no matter what value is plugged in for the variable, you will ALWAYS get a contradiction. Watch this tutorial and learn what it takes for an equation to have no solution.

What Does It Mean When An Equation Has No Solution ...

I solve this by first subtracting x from both sides of the equation and so on as Sal did in the videos. However, if I first subtract 1 from both sides of the equation, I get -x=x. I divided x into both sides, then I got -1=1 . That means no solution because -1=1 is no true, -1 can never equal 1.

What does no solution in algebra mean? - Answers

Solution : Solve the given equation. We find the same coefficient for x on both sides. So, subtract 4x on both sides to get rid of x-terms. 4x + 2 = 4x - 5. 2 = -5. When we solve the given equation, we don't find "x" in the result. But the statement (2 = -5) we get at last is false. So, there is no solution.

For a system of two linear equations and two variables, there can be no solution, exactly one solution, or infinitely many solutions (just like for one linear equation in one variable). If the two equations are in standard form (both variables on one side and a constant on the other side), then the following are true:

Number of solutions to equations | Algebra (video) | Khan ...

In elementary algebra, the quadratic formula is a formula that provides the solution(s) to a quadratic equation. There are other ways of solving a quadratic equation instead of using the quadratic formula, such as factoring (direct factoring, grouping, AC method), completing the square, graphing and others.

Then we'll look at the two weird kinds of solutions: "no solution", and the solution that is "all x ". The solution process ends in nonsense in the former case, and in a trivially-true statement in the latter. Because students don't encounter these types of solutions often, they're easy to forget, and thus easy to confuse.
