[EPUB] A Study On Gap Acceptance Of Unsignalized Intersection

This study aims to analyze driver behavior and estimate the critical gap at three-lane roundabouts. Video data were collected at two roundabouts. The analysis identified a pattern of group gap acceptance, where vehicles entering the roundabout from different lanes moved in groups during the same gap.

Gaps Accepted at Stop-Controlled Intersections

Studies of gap acceptance have concentrated on how drivers cross through a single stream of traffic. In day-to-day experience, drivers commonly face the difficult challenge of crossing multiple lanes of traffic coming from opposing directions.

TRAFFIC GENERATION FOR STUDIES OF GAP ACCEPTANCE

Traffic Gap Analysis
Many traffic manouvres require the road user (e.g. driver, rider or pedestrian) to select a break in the traffic stream that will enable them to move safely. Some examples

include pedestrians crossing a street or drivers entering a priority road from a side road. This behaviour is known as "gap acceptance".

THE GAP ACCEPTANCE STUDY OF U-TURN AT MEDIAN OPENINGS.

Increasingly, U-turns at median are used as an alternative to direct left turns in order to reduce conflicts and improve traffic operations along arterial roads when the volumes on both directions are very high. Compared with other turning movements at intersections (right/left turn), U-turn movement at median openings is highly complex and risky.

Traditional gap acceptance models use time to arrival as the main (and often only) determinant of whether a driver accepts a gap. Human factors research, however, suggests that drivers have difficulty in accurately perceiving time to arrival and that other variables, such as the distance to an oncoming vehicle, may be more salient.

Field Study of Gap Acceptance by Left-

The results show that the number of lanes on the major road, the presence of left turn lanes, and the gender of the driver are significant in explaining the variation of the gap acceptance probability. Gap acceptance

probability functions were determined by intersection type. In the third study, to focus on elderly drivers\’ gap acceptance behavior, data were extracted from two intersections, where a sufficient number of elderly drivers were observed.
