The objective of the lab is to design a system and calculate the transfer function, analyzing the stability of the system (both open and closed loop, with positive and negative feedback) with time domain approach and frequency response analysis, using MATLAB and also developing the system which is dynamic in nature with state space analysis approach.

CONTROL SYSTEMS LAB Laboratory Manual

The objective of this lab is to introduce to the students the design and implementation of digital control. The digital control is implemented on a lab-scale DC Servomotor in the control systems laboratory. The performance of the resulted digital control system is compared with the continuous-time control system performance.

A feedback is a common and powerful tool when designing a control system. Feedback loop is the tool which take the system output into consideration and enables the system to

adjust its performance to meet a desired result of system. In any control system, the output is affected due to change in environmental condition or any kind of disturbance.

Control System | Closed Loop Open Loop Control System

...

A feedback control system is a system whose output is controlled using its measurement as a feedback signal. This feedback signal is compared with a reference signal to generate an error signal which is filtered by a controller to produce the system's control input. We will concentrate on continuous-time linear time-invariant (LTI) feedback systems.

VWHPV - McGill CIM

A feedback control system consists of five basic components: (1) input, (2) process being controlled, (3) output, (4) sensing elements, and (5) controller and actuating devices.

These five components are illustrated in Figure 1. The term closed-loop feedback control is often used to describe this kind of system.

Automation - Feedback controls | Britannica

The role of control theory is to help us gain insight on how and why feedback control systems work and how to systematically deal with various design and analysis issues. Specifically, the following issues are of both practical

importance and theoretical interest: 1. Stability and stability margins of closed-loop systems.
