The collection of host-name-to-IP-address mappings contained with the DNS database is also known as a namespace. Essentially, when looking for a name in DNS, the DNS client first checks a top-level DNS server database. That server tells the client which DNS server hosts the next part of the DNS name, and the client then queries that server.

aul Albitz and I wrote the first edition of DNS and BIND way back in 1992. (Well, actually, we started it about 14 months before that, so in 1991.) Back then, DNS security wasn't a thing. BIND 4.8.3, the version of the BIND DNS server that was current when we wrote that first edition, had the following secu-rity features:
