Machining, Joining and Modifications of Advanced Materials
Springer

This book presents the latest advances in mechanical and materials engineering applied to the machining, joining and modification of modern engineering materials. The contributions cover the classical fields of casting, forming and injection moulding as representative manufacturing methods, whereas additive manufacturing methods (rapid prototyping and laser sintering) are treated as more innovative and recent technologies that are paving the way for the manufacturing of shapes and features

that traditional methods are unable to deliver. The book also explores water jet cutting as an innovative cutting technology that avoids the heat build-up typical of classical mechanical cutting. It introduces readers to laser cutting as an alternative technology for the separation of materials, and to classical bonding and friction stir welding approaches in the context of joining technologies. In many cases, forming and machining technologies require additional post-treatment to achieve the required level of surface quality or to furnish a protective layer. Accordingly, sections on laser treatment, shot peening and the

production of protective layers round out the book's coverage.

Integrated Design and Manufacturing in Mechanical Engineering

Proceedings of the 1st IDMME Conference held in Nantes, France, 15-17 April 1996
Springer Science & Business Media

This volume contains the selected papers of the first I.D.M.M.E. conference on 'Integrated Design and Manufacturing in

Mechanical Engineering', held in Nantes from 15-17 April 1996. Its objective was to discuss the questions related to the definition of the optimal design and manufacturing processes and to their integration through coherent methodologies in adapted environments. The initiative of the Conference and the organization thereof, is mainly due to the efforts of the french PRIMECA group (Pool of Computer Resources for Mechanics) started eight years ago. We were able to attract the international community with the support of the International Institution for Production Engineering Research (C.I.R.P.). The conference brought

together two hundred and fifty specialists from around the world. About ninety papers and twenty posters were presented covering three main topics : optimization and evaluation of the product design process, optimization and evaluation of the manufacturing systems and methodological aspects.

Ideas That Shaped Buildings *MIT Press*

Identifying the
 operative ideas in
 architectural theory
 from ancient Rome to
 the present and
 codifying them into
 coherent theoretical
 systems; for students,
 practitioners, and the
 general reader. In
 Ideas That Shaped
 Buildings, Fil Hearn
 identifies and codifies
 into theoretical
 systems the operative

tenets of architectural
 theory from ancient
 Rome to the present.
 With this strikingly
 original synthesis of
 architectural history
 and theory, he
 constructs an
 intellectual armature
 on which virtually any
 architectural concept,
 past or present, can be
 positioned. Dealing
 mainly with the
 treatises that have
 been highly influential
 historically, he
 organizes their
 concepts thematically
 and analyzes their
 development through
 time. Straightforward
 and concise, Ideas That
 Shaped Buildings is
 readily accessible to
 architecture students,
 practicing architects,
 and the general
 public—indeed anyone
 interested in
 understanding the
 design rationale of

buildings. Its overarching message is that, far from being constricting, proper knowledge and application of architectural theory is enabling and inspiring, and makes creative freedom possible by providing the conceptual awareness needed to devise a design. After an introductory history of the development of architectural theory, the text is divided into four parts. The first deals with issues relevant to all theories of architecture. The second, treating theory from antiquity to 1800, focuses on the prescriptive conventions inherent in the classical tradition. The third, treating theory after 1800, focuses on the inspirational principles

prompted by rationalist perceptions of the Gothic tradition. The fourth, treating theory since 1965, deals with rationales beyond rationalism and the influence of computers on design method and design formulation. The concepts discussed are illustrated with theoretical drawings and images of actual buildings.

Louis Vuitton City Bags: A Natural History *Rizzoli Publications*

This volume is an unprecedented history of Louis Vuitton's women's bags, the most coveted line of accessories in women's fashion. At the heart of Louis Vuitton are its City Bags, a range of women's bags that dates back to the turn

of the twentieth century. Featuring the trademark monograms of the house, the City Bag story began with the Steamer, a resort bag designed in 1901 to be packed inside a much larger steamer trunk. These bags have in a hundred years formally diversified into a dizzying array of handbags for every conceivable function demanded by the modern woman. Profoundly influential, City Bags are now known to millions by their descriptive names (Keepall, Bucket, Papillon, Alma, Locket, Noe, Speedy) and are still evolving into more fantastical forms. Lavishly illustrated with new and archival photography, historical graphics, landmark editorials, and ad campaigns, the volume

traces the history of these specific bag families, and examines the earliest specimens and today's most sought-after collectibles, including Vuitton's collaborations with Takashi Murakami, Stephen Sprouse, Richard Prince, Yayoi Kusama, and Rei Kawakubo and one-off projects by Zaha Hadid, Shigeru Ban, Vivienne Westwood, Helmut Lang, Andrée Putman, and of course, Marc Jacobs. *Louis Vuitton: City Bags* is an ambitious volume on the creation and cultivation of a cultural phenomenon.
