RELATIONAL ALGEBRA is a widely used procedural query language. It collects instances of relations as input and gives occurrences of relations as output. It uses various operations to perform this action. SQL Relational algebra query operations are performed recursively on a relation.

Relational Algebra in DBMS: Operations with Examples

Relational algebra is a mathematical query language for relations. It is a set based query language: The input to each operator is one or more relations, sets of tuples. The output of each operator is a relation: a set of tuples. Relational algebra is based on a minimal set of operators that can be combined to write complex queries.
