They create three "layers" for each conic section. For the parabola, they fold one layer to create a parabola, a second layer that shows the relationship between the focus and the latus rectum, and a third layer that examines the locus of points. For the ellipse, one layer is the ellipse, one shows the constancy of the distance from one focus to any point on the ellipse to the other focus, and one explores the relationship between a , b and c .

Math = Love: The Conic Section Foldable That Wasn't

In mathematics, a

conic section (or simply conic) is a curve obtained as the intersection of the surface of a cone with a plane. The three types of conic section are the hyperbola, the parabola, and the ellipse; the circle is a special case of the ellipse, though historically it was sometimes called a fourth type. The ancient Greek mathematicians studied conic sections, culminating around 200 ...

Conic section - Wikipedia

Conic Section: a curve obtained as the intersection of a cone (a right circular conical surface) with a plane; consists of those points whose distances to some point, called a focus, and some line,

called a directrix, are in a fixed ratio (eccentricity); traditional 3 types of conic sections: 1. hyperbola 2. parabola 3. ellipse; circle: special case of an ellipse (sometimes called the 4th type)

A fun classroom activity involving parabolas is paper folding with wax paper. The idea was obtained from an article by Scott Smith titled Paper Folding and Conic Sections. . Instructions. On the sheet of wax paper draw a fixed line and a fixed point. Fold the fixed point onto any point on the fixed line and crease the paper. Repeat this many times. The creases form tangents to an envelope parabola. The following is a GSP simulation of what takes place with the paper folding.
