Dynamic State Estimation Using Phasor Measurements

Abstract: Measurements provided by the phasor measurement units (PMUs) in a power network can be highly erroneous. Furthermore, some generating units may not have a local PMU, therefore it may not be possible to obtain high accurate and reliable results based on the previously studied dynamic state estimation approaches, which rely on the raw measurements provided by the

PMUs.

STATIC AND DYNAMIC STATE ESTIMATION OF POWER SYSTEMS

Basic Formulation. Dynamic state vector
for the generators is augmented by the
vector of all bus voltage magnitudes and
phase angles. Considering a system
with. N . buses, the augmented state
vector will be: $\begin{bmatrix} \mathbf{x} \\ \mathbf{v} \end{bmatrix} = \begin{bmatrix} \mathbf{x} \\ \mathbf{v} \end{bmatrix}$.

Synchronized Phasor Measurements and State Estimation

This paper points out the application of

artificial neural network for short-term
load forecasting where the projected
loads are utilized to define a discrete-
time state transition model (i.e., process
model). The model is applied to estimate
states dynamically and to generate
pseudo measurements. Weights of
neural network are not treated static and
would be carried out under reevaluation
alongside the estimation of state vector
dynamically.
