These circumstances combine to make it very difficult to monitor and control the boiler water level to any accuracy. What is required is a calm area of water which is representative of the actual boiler water level. With float and probe type

level controls, this is achieved in two ways: External chambers. Internal protection tubes.

Installation of Level Controls | Spirax Sarco

Automatic water level controller is used to automatically fill the overhead tank as and when it gets empty and monitors the water level. Automatic water level controller switches ON the motor when the water level in the overhead tank drops below pre fixed low level (on point) and puts off the motor when water level rises up to pre fixed high level (off point) motor also switches off when the sump water is exhausted before filling overhead tank, pump running dry, Mains voltage fluctuations.
