Moduli Spaces Of Riemann Surfaces

In mathematics, particularly in complex analysis, a Riemann surface is a one-dimensional complex manifold. These surfaces were first studied by and are named after Bernhard Riemann.

Riemann surfaces can be thought of as deformed versions of the complex plane: locally near every point they look like patches of the complex plane, but the global topology can be quite different. For example, they can look like a sphere or a torus or several sheets glued together. The main interest in Riemann surface

Moduli of a Riemann surface - Encyclopedia of Mathematics

Riemann's moduli space M_g of Riemann surfaces is obtained as the quotient of Teichmüller space by the mapping class group. Teichmüller space T_g is known to be a complex manifold of complex dimension $3g-3$, and the cotangent space at Σ is identified with $QD(\Sigma)$, the space of holomorphic quadratic differentials.

the Moduli Space of Riemann Surfaces

We construct a moduli space for Riemann surfaces that is universal in the sense that it represents compact Riemann surfaces of any finite genus. This moduli space is a connected complex subspace of an infinite

dimensional complex space, and is stratified according to genus such that each stratum has a compact closure, and it carries a metric and a measure that induce a Riemannian metric and a finite volume measure on each stratum.

Mirzakhani made several contributions to the theory of moduli spaces of Riemann surfaces. Mirzakhani's early work solved the problem of counting simple closed geodesics on hyperbolic Riemann surfaces by finding a relationship to volume calculations on moduli space. Geodesics are the natural generalization

of the idea of a "straight line" to "curved spaces".

In algebraic geometry, a moduli space of (algebraic) curves is a geometric space (typically a scheme or an algebraic stack) whose points represent isomorphism classes of algebraic curves. It is thus a special case of a moduli space. Depending on the restrictions applied to the classes of algebraic curves considered, the corresponding moduli problem and the moduli space is different.

Teichmüller theory and moduli of Riemann surfaces. This is a sequel to my

earlier question asking for references for Teichmüller theory and moduli spaces of Riemann surfaces. In this connection, I have read Chapter 11 of the book *Primer of mapping class groups* by Dan Margalit and Benson Farb.
