Actinomyces turicensis Necrotizing Soft-Tissue Infection ...

Intravenous polyspecific immunoglobulin (IVIG) is a preparation of polyclonal serum immunoglobulins, typically IgG, from thousands of donors. It has been used as adjunctive therapy in critically ill patients with severe infections, i.e. sepsis, septic shock, and necrotizing soft tissue infections. IVIG has been used for patients with severe invasive group A streptococcal infection since

the early nineties and off-label use of IVIG for necrotizing soft tissue infections is common.

Treatment of Necrotizing Soft Tissue Infections: IVIG ...

A very severe and usually deadly form of necrotizing soft tissue infection is due to the bacteria *Streptococcus pyogenes*, which is sometimes called "flesh-eating bacteria" or strep. Necrotizing soft tissue infection develops when the bacteria enters the body, usually through a minor cut or scrape. The bacteria begin to grow and release harmful substances (toxins) that kill tissue and affect blood flow to the area.

Necrotizing soft tissue infection: MedlinePlus Medical ...

The most common focus of infection is soft tissue (e.g., cellulitis, necrotizing fasciitis, myositis, pharyngitis, skin abscess, surgical wound infection). Toxic shock may result from any invasive infection, for example: Pneumonia and empyema (Group A streptococcal pneumonia tends to cause empyema).

Toxic Shock Syndrome (TSS) - EMCrit Project

Necrotizing soft-tissue infections (NSTIs) are a collection of rapidly advancing, often fatal infections of the subcutaneous tissues and fascia. Mortality for NSTI has been reported to range from 21–43%

in single center studies[1, 2].

Contemporary Trends in Necrotizing Soft Tissue Infections ...

Necrotizing fasciitis(NF), also known as flesh-eating disease, is an infectionthat results in the deathof parts of the body's soft tissue. It is a severe disease of sudden onset that spreads rapidly. Symptoms usually include red or purple skin in the affected area, severe pain, fever, and vomiting.
