In torrefaction unit (Fig. 20b), the torrefaction is an autothermal operation without the addition of external heat except for initial ignition (i.e., the energy content of the torrefaction gases matches exactly the overall heat input requirements of the entire process). Then, considering critical production parameters in the process, including biomass delivered costs, capital expenditure, labor, energy consumption, etc., biomass delivery costs and depreciation were the dominant factors ...

Biomass torrefaction: properties, applications, challenges ...

Torrefaction is a heating process of biomass in a non-oxidizing atmosphere, necessary to improve raw biomass materials. Torrefied biomass properties include a lower moisture percentage, a higher energy density and heating value. Torrefied material is easier to grind and to pelletize. These properties all translate into a sustainable and economic higher value.

Economic analysis of biomass torrefaction plants ...

The advantages of torrefied biomass are widely recognized: better transportation characteristics and compatible properties to coal such as heating value, grindability, bulk energy density and hydrophobicity. Torrefaction is seen as a breakthrough technology to decrease the handling and storage costs and reduce investment for co-firing application.

Torrefaction Benefits - IBTC

Production costs in a medium scale stand-alone torrefaction plant of 72 800 t/a are over 40 €/MWh, and integration to an existing CHP plant does not reduce the costs substantially. The integration of torrefaction to wood industry plants results in clear savings. A production price level of 34-38 €/MWh is reached.

Biomass Pellets Torrefaction Plant

Terra Green Energy LLC, a renewable fuels technology development company in McKean County, PA, has developed a unique torrefaction facility for commercial production. Torrefaction, a “mild pyrolysis” process, transforms biomass into a form that is compatible with existing coal technology and requires less expensive storage options.

Terra Green Energy: Pioneers in Torrefaction for ...

Torrefaction is a thermal process where a biomass feedstock is heated at 200 to 300 °C in the absence of oxygen. It has also been called a mild pyrolysis process. (1) The main objective is to use the torrefied biomass (“biocoal”) as a fuel, especially as a

pellet for cofiring at pulverized coal power plants.

Composition, Utilization and Economic Assessment of ...

The results show that the torrefaction supply chain reaps significant economies of scale up to a plant size of about 150-200 kiloton dry substance per year (kton(DS)/year), for which the total supply chain costs accounts to 31.8 euro per megawatt hour

based on lower heating value ((sic)/MWLHV).

Analysing biomass torrefaction supply chain costs - CORE

The second thing to consider in torrefaction economics is the power balance, or how much energy is needed to convert biomass into biocoal. "This is a function of your reactor technology," van der Burg explains. "In our case, it's only 2 to 2.5 percent of the total energy output.
