Factor a perfect square trinomial

A perfect square trinomial is a trinomial that can be written as the square of a binomial. Recall that when a binomial is squared, the result is the square of the first term added to twice the product of the two terms and the square of the last term. We can use this equation to factor any perfect square trinomial.

Difference of Perfect Squares An important special case when trying to factor polynomials is a identifying the difference of perfect squares. We learn to recognize a difference of perfect squares because they have a special, easily factored form. It's also important to recognize the factored form to make the multiplication of the binomials easier.

Techniques for Factoring Polynomials - Online Math Learning

In mathematics, factorization or factoring consists of writing a number or another mathematical object as a product of several factors, usually

smaller or simpler objects of the same kind. For example, 3×5 is a factorization of the integer 15, and is a factorization of the polynomial $x^2 - 4$. Factorization is not usually considered meaningful within number systems possessing division, such as the real or complex numbers, since any x $\{ \displaystyle x \}$ can be trivially written as ...
