Universität Düsseldorf: Evolutionary Genetics

Evolution is change in the heritable characteristics of biological populations over successive generations. These characteristics are the expressions of genes that are passed on from parent to offspring during reproduction. Different characteristics tend to exist within any given population as a result of mutation, genetic recombination and other sources of genetic variation.

Evolution - Wikipedia

The Department of Evolutionary Genetics studies the genetic history of humans, apes and other organisms. We are interested in both the forces that affect the genome directly, such as mutation and recombination, and in the

effects of selection and population history.
