Aircraft Structures for Engineering Students, Fourth Edition

Aircraft Materials and Analysis addresses aircraft design, mechanical and structural factors in aviation, flight loads, structural integrity, stresses, properties of materials, compression, bending, and aircraft fatigue. Detailed analysis of the failure process is provided. This authoritative guide examines materials used in aircraft construction such as aluminum, steel, glass, composite,

rubber, and carbon fiber.

**Aircraft Materials and Analysis:
Siddiqui, Tariq ...**

Mechanical properties, many of which are unique to composites, are also discussed in Part 1: knowledge of these properties is critical to the analysis of composite laminates that are used for aircraft structures. Also included are design considerations for composite laminates and the structures that use them.

Needless to mention that Bruhn book: analysis and design of flight vehicles structures is still the leading industry standard, and Niu books are

complementary to it. As such, this book is good to read in parallel with aircraft structural design courses.

**Airframe Structural Design:
Practical Design Information ...**

The airframe is the basic structure of an aircraft and is designed to withstand all aerodynamic forces, as well as the stresses imposed by the weight of the fuel, crew, and payload. The primary function of an aircraft electrical system is to generate, regulate, and distribute electrical power throughout the aircraft.
