Water pollution is the contamination of water in water bodies such as rivers, oceans, lakes and swamps. This means that one or more substances have built up in water to the extent of causing problems to people,

animals and plants.
Water pollution means
any substance that
makes water dirty.
Usually, dirty here
means unfit for use.

Water pollution can be

improve water
quality?**

Non-point source
pollution is more
common, and

contributes more
pollution to surface
water than does point
source pollution. This
type of pollution is
difficult to identify and
may come from
pesticides, fertilizers,
or automobile fluids
washed off the ground
by a storm.

sewage and water
pollution from fertiliser
runoff have the same
end result (increase in
decomposing bacteria
leading to a decrease
in dissolved oxygen
and death of aquatic
organisms) but they do
not arrive at this point
in the same way. You
need to learn both and
be aware of the
differences between
them.
