10+ Early Humans The Pleistocene And Holocene Epochs ...

The evolution of anatomically modern humans took place during the Pleistocene. In the beginning of the Pleistocene Paranthropus species were still present, as well as early human ancestors, but during the lower Palaeolithic they disappeared, and the only hominin species found in fossilic records

is Homo erectus for much of the Pleistocene.

Pleistocene - Wikipedia

In the rest of the Pacific (other Australasian islands such as New Caledonia, and Oceania) although in some respects far later, endemic fauna also usually perished quickly upon the arrival of humans in the late Pleistocene and early Holocene. This section does only include extinctions that took place prior to European discovery of the respective islands.

Quaternary extinction event - Wikipedia

This doctoral thesis presents the results of the pioneering archaeological investigation conducted in the Northern Mexican Highlands with the aim to evaluate the existing indicators of the earliest human occupations at the end of the Pleistocene and discover new evidence of ancient cultural manifestations through a systematic exploration of an endorheic basic in the Zacatecas desert, a region never studied before.

Archaeology of Early Human Occupations and the Pleistocene ...

Holocene Epoch, formerly Recent Epoch, younger of the two formally recognized epochs that constitute the Quaternary Period and the latest interval of geologic time, covering approximately the last 11,700 years of Earth’s history. The sediments of the Holocene, both continental and marine, cover the largest area of the globe of any epoch in the geologic record, but the Holocene is unique because it is coincident with the late and post-Stone Age history of humankind.

Holocene epoch | Causes, Effects, & Facts | Britannica

In a large study of six different herbivores from around the world, 846 radiocarbon-dated mtDNA sequences, 1439 directly dated faunal remains, and 6291 radiocarbon dates associated with human occupation, all taxa showed dramatic range contractions from the terminal Pleistocene to the early Holocene [56]. Four species (horse, reindeer, bison, and musk ox) show a positive correlation between range size and genetic diversity through four time points.

Early Holocene - an overview | ScienceDirect Topics

Abstract Recent research on the Bering Glacier forelands in the northern Gulf of Alaska provides new insights into late Pleistocene/early Holocene shorelines, providing a favorable route for human migration as early as ~16,000 cal yr BP.

Late Pleistocene marine resources from the Bering Glacier ...

The Early Holocene human occupation of the northern part of Eastern Europe is connected with the spread of Mesolithic and Neolithic societies. Global changes in landscapes and fauna in the Final Pleistocene and the advent of Holocene led to important progress in human behavior and dispersals toward the North, in the northern boreal forest and forest-tundra.

Early Holocene - an overview | ScienceDirect Topics

Small-mammal remains document faunal turnover between Pleistocene and Holocene communities. The near-contemporaneity of species that strongly differ in their ecological requirements suggest that the terminal Pleistocene and early Holocene in central Alaska was a period of dynamic change that may have been characterized by patchy vegetation distribution, rather than the climax communities seen today.
