For a given algorithm, we can represent best, worst, and average cases in the form of expression. Example:- $f(n) = n^2 + 500$, for worst case. $f(n) = n + 100n + 500$, for best case. Similarly, we can define the average case too. In the next article, I am going to discuss Asymptotic Notation. Here, in

In computer science, the analysis of algorithms is the process of finding the computational complexity of algorithms – the amount of time, storage, or other resources needed to execute them. Usually, this involves determining a function that relates the length of an algorithm's input to the number of steps it takes (its time complexity) or the number of storage locations it uses (its space ...
