Routing protocols The internet is a collection of connected networks. As a result, all routers do not work in the same way, this depends on the type of network upon which they are found. In fact, there are different levels of routers which operate with different protocols:

Routing over the Internet - CCM

Network routing is the process of selecting a path across one or more networks. The principles of routing can apply to any type of network, from telephone networks to public transportation. In packet-switching networks, such as the Internet, routing selects the paths for Internet Protocol (IP) packets to travel from their origin to their destination.

What is routing? | IP routing | Cloudflare

Routing is the process of selecting a path for traffic in a network or between or across multiple networks. Broadly, routing is performed in many types of networks, including circuit-switched networks, such as the public switched telephone network, and computer networks, such as the Internet. In packet switching networks, routing is the higher-level decision making that directs network packets from their source toward their destination through intermediate network nodes by specific packet forwar

Routing - Wikipedia

The process of transferring these packets of information from their source node to the destination node with one or more hops in between along the most optimum path is called as ‘Routing’. Routers and switches are the devices that are used for the purpose which work on the routing protocols and algorithms they are configured with. This packets are taken care of by the L3 layer or the network layer of the OSI Reference Model.

What is Routing? | Types of Routing | How does it take place?

Internet routing is the process of transmitting and routing IP packets over the Internet between two or more nodes. It is the same as standard routing procedures but incorporates packet routing techniques and processes on external networks or those that are hosted or Internet enabled. It utilizes IP-based networks, but mainly those which are publicly accessible such as that of ISPs.

What is Internet Routing? - Definition from Techopedia

In a number of countries, there is a trend towards regulatory control of how Internet operators manage network interconnection and routing. Interconnection and routing choices are critical decisions taken for local and operational reasons to ensure network resilience and optimal traffic flows.

BGP and EGP. The Border Gateway Protocol is the Internet standard External Gateway Protocol (EGP). BGP detects modifications to routing tables and

selectively communicates those changes to other routers over TCP/IP . Internet providers commonly use BGP to join their networks together.

Top 5 Network Routing Protocols Explained

A Router is a networking device that forwards data packets between computer network. This device is usually connected to two or more different networks. When a data packet comes to a router port, the router reads address information in packet to determine out which port the packet will be sent.

B does not have an Internet connection but finds an Internet route to node C on its Routing Set. Thus, B changes the RREQ-IoT destination to node C and forwards the message in unicast to C . Thus, inspired by the SmartRREQ, the Internet route discovery process is optimized to reduce the number of broadcast transmissions, thereby contributing to the reduction of energy consumption.

Internet global routing table continues to grow with no signs of slowing down. The major contributor to this growth is an ongoing IPv4 disaggregation, as well as a proliferation of IPv6 Internet. As a network administrator, you need to be prepared to protect your network from negative consequences of this growth by optimizing your routing policies and upgrading physical infrastructure.
