for transcriptome analysis where mRNA expression levels can be determined.

Applications of Bioinformatics in Cheminformatics.

Cheminformatics (aka chemical informatics or chemoinformatics) focuses on storing, indexing, searching, retrieving, and applying information about chemical compounds.

Cheminformatics involves organization of chemical data in a logical form to facilitate the retrieval of chemical properties, structures and their relationships.

Applications of Bioinformatics in Medicine and Biotechnology

Bioinformatics is a combination of biology and computer science

while biotechnology is a broad scientific discipline where biological sciences combined with engineering.

Biotechnology exploits cellular and biological processes to develop new technologies, as well as products functional in different fields like research, agriculture, industry, health care, environment, etc.

Career in Biotechnology and Bioinformatics

Considering job prospects I would say Biotechnology comes first to Bioinformatics. Biotechnology is related to laboratory(both dry and wet lab) works which include from sample extraction, preparation and further processes and the

work includes (biochemistry, molecular biology, genetics, microbiology, immunology etc) whereas Bioinformatics is related to dry laboratory work where you use the biotechnology samples and analyse them using the software.
