...

Spatial analysis in ecology The first step in understanding ecological processes is to identify patterns. Ecological data are usually characterized by spatial structures due to spatial autocorrelation. Spatial autocorrelation refers to the pattern in which observations from nearby locations are more likely to have similar magnitude than

by chance alone.

Introduction to spatial analysis of ecological data using ...

Most ecological data

exhibit some degree of spatial autocorrelation, depending on the ecological scale (spatial resolution) of interest. As the spatial arrangement of most ecological data is not random, traditional random population samples tend to overestimate the true value of a variable, or infer significant correlation where there is none.

Spatial ecology - Wikipedia

It is perhaps this confusion that explains why a recent review of the ecological literature found that 80% of studies analysing spatial data did not use spatially explicit statistical models at all, despite the potential for introducing erroneous results into the

ecological literature if important features of the data are not properly accounted for in the analysis (Dormann 2007). It follows that the important synthesis required by ecologists is the identification of which methods ...

Regression analysis of spatial data - Beale - 2010 ...

This book provides a practical introduction to analyzing ecological data using real data sets collected as part of postgraduate ecological studies or research projects. The first part of the book gives a largely non-mathematical introduction to data exploration, univariate methods (including GAM and mixed modeling techniques), multivariate analysis,

time series analysis (e.g. common trends) and spatial statistics.

Analysing Ecological Data - highstat.com

Abstract. Ecological datasets tabulating hundreds or thousands of species are now becoming available. Identifying and understanding the underlying clustering or communities of species which comprise these datasets is difficult with existing joint species distribution models as they usually model dependence on covariates or spatial effects at the species level rather than at the community level.

A spatial community regression approach to exploratory ...

The spatial heterogeneity of

populations and communities plays a central role in many ecological theories, for instance the theories of succession, adaptation, maintenance of species diversity, community stability, competition, predator-prey interactions, parasitism, epidemics and other natural catastrophes, ergoclines, and so on.

Spatial pattern and ecological analysis | SpringerLink

The course will cover the concepts and R tools that can be used to analyse spatial data in ecology covering elementary and advanced spatial analysis techniques applicable to both plants and animals. We will investigate analyses appropriate to transect (e.g. line

surveys, trapping arrays), grid (e.g. occupancy surveys) and point data (e.g. telemetry).

Spatial analysis of ecological data using R (SPAEO5) - PR ...

The scope of spatial statistics problems arising in ecology is substantial. They concern both plant and animal behavior. Here, we discuss only plants. The range of issues is still very large and so we confine ourselves to four challenges, each within the context of model development.
