Antioxidants. Polymers will change over time when exposed to radiation, excessive heat and/or corrosive environments. These changes are the result of oxidative degradation caused by free radicals which form through hydrogen abstraction or homolytic scission of carbon-carbon bonds when polymers are exposed to heat, oxygen, ozone, or light.

Antioxidant activity (DPPH assay) of

polyacrylic powders The free radical scavenging capacities of both monomers and polymers were determined by DPPH assay according to a known protocol (Fazio et al., 2013). 2,2-diphenyl-1-picrylhydrazyl radical (DPPH) is a stable free radical, and when it reacts with a radical scavenger, its maximum absorbance at 517 nm decreases quickly; the antioxidant effect is proportional to the disappearance of DPPH in test samples.
