Throughout this lab, the same sample of copper formed various different compounds, from copper hydroxide to copper (II) oxide. During all of these reactions, the mass of copper remained constant, for the Law of Conservation of Mass states it so. Stoichiometry can be used to illustrate how the mass remains constant during the experiment.

In the lab, the copper was dissolved in nitrate acid which released a brown smoke and the liquid turned a pure blue. Then, the beaker was put in an ice bath and added sodium hydroxide in order to change the state to a solid. It was then headed to separate the solid from the liquid. It was decanted to get rid of the liquid.
