A lattice is an abstract structure studied in the mathematical subdisciplines of order theory and abstract algebra. It consists of a partially ordered set in which every two elements have a unique supremum and a unique infimum. An example is given by the natural numbers, partially ordered by divisibility, for which the unique supremum is the least common multiple and the unique infimum is the greatest common divisor. Lattices can also be characterized as algebraic structures satisfying certain a

The concept of a lattice first arose in the late 19th century and was connected with the fact that many results about the set of ideals of a ring or the set of normal subgroups of a group seemed analogous and could be proved in the framework of modular lattices.
