Lines Angles And Triangles Geometry

The sum of interior angles in a triangle is 180°. To prove $\angle a + \angle b + \angle c = 180^\circ$, firstly draw a line parallel to one side of the triangle. $\angle d = \angle b$ (alternate angles are equal)

Two triangles have the same area if they have the same base and lie between two parallel lines. In a triangle side opposite to smaller angle is smaller in comparison to the side which is opposite to greater angle. When the corresponding sides of two triangles are in proportion then the corresponding angles are also in proportion.

Line, Angle and Triangle - Questions with Solution

A triangle is composed of three line segments. The line segments intersect in their endpoints. To name a triangle we often use its vertices (the name of the endpoints). The triangle below is named ABC. A triangle has three angles. The sum of the measures of the angles is always 180° in a triangle. We have different types of triangles.
