Use a double induction. First prove that $F[0,0]$ is correct. Then, assuming $F[n,0]$ is correct, that $F[n+1,0]$ is correct.

These are both trivial for the given algorithm. And finally, if $F[j, k]$ is correct for all $[j, k]$ lexicographically less than or equal to $[n, k]$, that $F[n, k+1]$ is correct. For this you will need to take cases.

A proof of correctness of an algorithm is a mathematical proof of the following:
Whenever the algorithm is run on a set of inputs that satisfy a problem's precondition, the algorithm halts, and its outputs (and inputs) satisfy the problem's postcondition.
