Astrophotography with a telescope. The other way to go about astrophotography is to do it with a telescope. Some of the equipment will be the same as the

above, but you will essentially be swapping out the camera lens and replacing it with the telescope – the telescope effectively is the lens.

The Ultimate Beginners Guide to Astrophotography (2020)

Astrophotography on the go. I travel and I camp quite a lot. And I love astrophotography. How can you mix these two? Some time ago, I was using a traditional German equatorial mount, a guidescope and a laptop for astrophotography. The mount was around 18 kilos, tripod included, the guidescope around 2 and the laptop added another 1.5 kg to the ...

Astrophotography on the go - Alex Conu Photography

Use Longer Shutter Speeds. Many shooters use shutter speeds of 30 seconds and longer, but if you can leave your aperture wide open, you should already be able to get a good shot of the stars at 20 seconds. Set High ISO Levels. For deep-sky astrophotography, your ISO levels should generally be set high and support your other exposure settings.

What Camera Settings Should I Use for Astrophotography?

In astrophotography, the magnification and scale of your image will vary widely depending on the optical instrument used. Sometimes, you want to capture a massive area of the night sky such as the core of the Milky Way. Other times,

we focus on small nebulae and galaxies for a closer look.
