Vaccine-Nation

Poisoning the Population, One Shot at a Time *Ener-Chi*

Wellness Center

Author of a dozen books, including the bestselling *Timeless Secrets of Rejuvenation and Health* and *Cancer is Not a Disease*, Andreas Moritz takes on yet another controversial subject, this time to expose the Vaccine Myth. In *Vaccine-nation*, Moritz unravels the mother of all vaccine lies - that vaccines are safe and they prevent disease. Furthermore, he reveals undeniable scientific proof that vaccines are actually implicated in most common diseases today. This book reveals: Statistical evidence that vaccines never actually eradicated infectious diseases, including polio. How childhood vaccines, flu shots and other kinds of inoculations systemically destroy the body's immune system. The massive increase of allergies, Eczema, Arthritis, Asthma, Autism, Acid reflux, Cancer, Diabetes (infant and childhood), Kidney disease, Miscarriages, many Neurological and Autoimmune diseases, and Sudden Infant Death Syndrome (SIDS) is largely due to vaccines. Why vaccinated children have 120% more Asthma, 317% more ADHD, 185% more Neurologic disorders, and 146% more Autism than those not vaccinated. The shocking fact that most outbreaks of infectious diseases occur largely among those who are fully vaccinated. Vaccines lack long-term safety testing and most vaccine side-effects are never reported to protect vaccine-makers from liability suits. For many decades we have all been led to believe that vaccines have eradicated the most dreaded infectious diseases, including polio, although to this day there is no scientific evidence to support this theory. On the other hand, indisputable scientific data reveal that childhood vaccines, flu shots and other kinds of inoculations are responsible for the dramatic decline of natural immunity among

millions of children, adults, and members of the older population. With each new shot received, the immune system becomes weaker and permanently damaged, thereby laying the ground for potentially debilitating illnesses to develop in the future. Reaching deep into the vaccine cartel, Moritz uncovers hard facts to prove that profit - not public health - is the sole motive behind the vaccine-pushers' chicanery. In this book, he also digs up the real reasons behind the 2009 swine flu outbreak or the "pandemic that didn't pan out." In *Vaccine-nation*, Moritz minces no words while unraveling these and other skeletons in Big Pharma's closet and cautions you not to buy into the hollow claims of vaccine makers. In his characteristic style, Moritz offers a gentle and practical approach to a disease-free life, which rests on the fulcrum of the mind-body connection, cleansing of the body, and naturally healthy living.

The dosage is under your control and your body easily tells you when you have had just about the right amount of it. Unfortunately, even though sunlight is readily available all through the day, many people fail to profit from it. Read this book to learn how you can harness sunlight, nature's most potent and curative powers, for maintaining good health. It is a misconception that the sun is the main culprit for causing skin cancer, certain cataracts leading to

blindness, and aging. Research has actually shown that most skin cancers occur among those who rarely ever spend time in the sun or who use sunscreens filled with carcinogenic chemicals. It has been known for several decades that those living mostly in the outdoors, at high altitudes, or near the equator, have the lowest incidence of skin cancers and are among the healthiest people on the planet. Patients suffering from gout, rheumatoid arthritis, colitis, arteriosclerosis, diabetes, cancer, hypertension, tuberculosis, anemia, cystitis, eczema, acne, psoriasis, herpes, lupus, sciatica, kidney problems, asthma, as well as burns, have all shown to receive great benefit from the healing rays of the sun. *Heal Yourself With Sunlight* tells you, among other things, how Vitamin D, which the skin produces in response to sun exposure, keeps the body's immune system strong, prevents the bone-thinning disease osteoporosis, and reverses numerous types of cancer, among many other illnesses. Sunlight is the ultimate source of life on earth and the ideal panacea to increase the effectiveness of every other healing modality. Unlike drugs, surgery or radiation, sunlight costs nothing, has no harmful side-effects, and foremost of all, it makes you feel good.

Diabetes - No More! *Ener-Chi.Com*

According to this bestselling author, diabetes is not a disease; in the vast majority of cases, it is a complex mechanism of protection or survival that the body chooses to avoid the possibly fatal consequences of an unhealthful diet and lifestyle. Despite the body's ceaseless self-preservation efforts (which we call diseases), millions of people suffer or die unnecessarily from such consequences. The imbalanced blood sugar level in diabetes is

but a symptom of illness, not the illness itself. By developing diabetes, the body is neither doing something wrong nor is it trying to commit suicide. The current diabetes epidemic is man-made, or rather, factory-made, and, therefore, can be halted and reversed through simple but effective changes in diet and lifestyle. Diabetes - No More provides you with essential information on the various causes of diabetes and how anyone can avoid them. To stop the diabetes epidemic we need to create the right circumstances that allows the body to heal. Just as there is a mechanism to become diabetic, there is also a mechanism to reverse it. Toxicologic Pathology

Nonclinical Safety Assessment, Second Edition *CRC Press*

Following the success of the first edition, this book is designed to provide practical and timely information for toxicologic pathologists working in pharmaceutical drug discovery and development. The majority of the book (Organ Systems) will provide detailed descriptions of histopathological lesions observed in drug development. In addition, it will provide information to assist the pathologist in making determinations of the origin of lesions as well as its relevance to human risk. Toxicologic Pathology: Nonclinical Safety Assessment, Second Edition includes 2 new concept chapters. The first of the new chapters address approaches for the evaluation of unique therapeutic modalities such as cell therapies, gene therapies, and gene expression knockdown therapies. While these still represent

new developing therapeutic approaches, there has been significant experience with the therapeutic modalities in the last 5 years. The second new chapter addresses the nonclinical safety assessment of medical devices, a topic of increasing importance that was not addressed in a unique chapter in the first edition. The other concept chapters have been updated and cover important topics including the overview of drug development; principles of nonclinical safety assessment; an introduction to toxicologic pathology; techniques used in toxicologic pathology, clinical pathology, toxicokinetics, and drug development toxicogenomics; and spontaneous lesions. The 13 organ system chapters provide the specifics related to pathologic characteristics, differential diagnosis, and interpretation of toxic responses in each organ system. These chapters are specifically important for the bench pathologist but also for the toxicologist who interacts with pathologists and function as study toxicologists and project team representatives in the drug development arena.

Heart Disease No More! *Ener-Chi.Com*

Make Peace with Your Heart and Heal Yourself Less than one hundred years ago, heart disease was an extremely rare disease. Today it kills more people in the developed world than all other causes of death combined. Despite the vast amount of financial resources spent on finding a cure for heart disease, the current medical approaches remain mainly symptom-oriented and do not address the underlying causes. Even worse: There is overwhelming evidence to show that the treatment of heart disease or its presumed precursors, such as high blood pressure, hardening of the arteries and high cholesterol, does not only prevent a real cure but can easily lead to chronic heart failure. The patient's heart may still beat, but not strong enough to feel vital and alive. Without removing the underlying causes of heart disease and its precursors, there is little, if any, protection against it. Heart attacks can strike regardless whether you have had a coronary bypass done or stents placed inside your arteries. According to research, these procedures fail to prevent heart attacks or reduce mortality rates. Heart Disease No More, excerpted from the author's bestselling Timeless Secrets of Health & Rejuvenation, puts the responsibility for healing where it belongs, that is, to the heart, mind and body of each individual. It

provides you with the practical insights about how heart disease develops, what causes it and what you can do to prevent and reverse it for good, regardless of a possible genetic predisposition.

Toxicologic Pathology

Nonclinical Safety Assessment *CRC Press*

As drug development shifts over time to address unmet medical needs and more targeted therapies are developed, previously unseen pharmacological or off-target effects may occur in treatment. Designed to provide practical information for the bench toxicologic pathologist working in pharmaceutical drug research, Toxicologic Pathology: Nonclinical Safety Assessment presents a histopathologic description of lesions observed during drug development and discusses their implication in the drug development process. Divided into two sections, the book systematically assists pathologists in making a determination as to the origin and potential importance of a lesion and its relevance for assessing human risk. The first section includes eight "concept" chapters to orient pathologists in areas that are important for effective interaction with other pathologists as well as the many non-pathologists involved in drug development. The second section is made up of organ-based chapters, each including light microscopic and electron microscopic descriptions of pathological lesions, differential diagnoses, biological consequences, pathogenesis, mechanism of lesion formation, and the expected clinical pathology correlates. This volume presents critical information—both published and unpublished and gained

through personal experience—to improve the quality of drug safety evaluation and to expedite and improve the efficiency of the process. This book is crafted to assist students, residents, and toxicologic pathologists in their early career phase by serving as a resource that can effectively be used as a ready reference next to the microscope. In addition, more experienced pathologists will find this volume to be invaluable during their assessments. The book is also a valuable reference for toxicologists to assist in understanding compound-related pathological findings and to provide background for working on a range of toxicological problems.

Ending the AIDS Myth *Ener-Chi.Com*

Despite common belief, there is no scientific evidence to this day

that AIDS is a contagious disease. The current AIDS theory falls short in predicting the kind of AIDS disease an infected person may be manifesting, and there is no accurate system to determine how long it will take for the disease to develop. In addition, the current HIV/AIDS theory contains no reliable information that can help identify those who are at risk of developing AIDS. On the other hand, published research actually proves that HIV only extremely rarely spreads heterosexually and cannot be responsible for an epidemic that involves millions of AIDS victims around the world. Furthermore, it is an established fact that the retrovirus HIV, which is composed of human gene fragments, is incapable of destroying human cells. However, cell destruction is the main characteristic of every AIDS disease. Even the principal discoverer of HIV, Luc Montagnier, no longer believes that HIV is solely responsible for causing AIDS. In fact, he showed that HIV alone could not cause AIDS. There is increasing evidence that AIDS may be a toxicity syndrome or metabolic disorder that is caused by immunity risk factors, including heroin, sex drugs, antibiotics, commonly prescribed AIDS drugs, rectal intercourse, starvation, malnutrition and dehydration. Dozens of prominent scientists working at the forefront of the AIDS research are now openly questioning the virus hypothesis of AIDS. Find out why! Ending the AIDS Myth also shows you what really causes the shutdown of the immune system and what needs to be done to avoid it!
