OBD-II, Electronic Engine Management Systems 1996-On

The "II" stands for "second-generation system." OBD II first appeared in 1994, and it has been required on all cars and light trucks since 1996. Unlike earlier onboard diagnostic systems that set a diagnostic trouble code only when a sensor failed or read out of range, OBD II monitors most engine functions while the vehicle is being driven.

To complete an OBD II inspection, the (NYVIP2) test equipment makes an electronic request for information to the vehicle being inspected through a standardized diagnostic link connector (DLC). The subject vehicle responds back to the (NYVIP2) equipment with data including vehicle information, the MIL Command (not the actual lamp) on/off status ...

OBDII - NYVIP

OBD II offers several advantages over traditional tailpipe-based emissions inspections. OBD II alerts the driver, by illuminating the MIL, of an engine management or emissions control issue once it's been encountered. There are circumstances where the OBD II system may detect a problem before the driver notices an operational issue.

On-board diagnostics (OBD) is an automotive term referring to a vehicle's self-diagnostic and reporting capability. OBD systems give the vehicle owner or repair technician access to the status of the various vehicle sub-systems. The amount of diagnostic information available via OBD has varied widely since its introduction in the early 1980s versions of on-board vehicle computers.
