Overview. In general, the direct determination of additives in plastics, as opposed to carrying out a preliminary extraction technique, such as is discussed in Chapter 2, is less time consuming and more reproducible. The direct determination of all the additives in such extracts is not always possible because of spectral interferences from other additives, low relative molecular weight (MW), mass matrix oligomers and the extracting solvent.

Certain additives, such as acrylic polymers, can improve impact and provide greater ease of processing at the same time. PVC material that is intended for molding or extrusion is often treated with lubricants, processing aids, and impact additives at the same time.

Polymer Additives and Their Functions

The first stage in the examination of a polymer, either from the point of view of identifying the polymer or identifying and determining additives present must be to separate gross polymer from gross additives. It may then be necessary to separate the gross additive fraction into individual additives by a chromatographic procedure in order to facilitate the identification of individual additives.
