How To Troubleshoot Cat Fuel Systems and Test Diesel ...

The #1 injector is factory set so it is checked for proper position and once that setting is done the other injector racks are checked for the correct travel. When they are all adjusted within the proper parameters the next step is injection timing. The engine has to be positioned properly for this adjustment. The valves can be adjusted at the same time with two revolutions of the engine. The full fuel needs to be checked as well.

Cat 3116 Diesel Engine Tools and Adjustments | Mechanics Hub

On the early 3306 with compact scroll fuel pumps there is no provision to centre the rack (no pin or spacer block) on the pump itself. You need the rack setting tool group to centre the rack . Also on the early pumps some had a speed limiter plunger which limited governor lever travel to low idle until oil pressure built up to overide the plunger.

Heavy Equipment Gauges for Caterpillar for sale | eBay

The rack is set with a pin and the quadrants on the plungers have a slot in them which engages with a pin down in the hole. If you have the rack in the wrong position, the pump element won't lift out in the first place due to aforementioned pin not lining up. It's not impossible to go wrong, but it's pretty hard. Cmark, Aug 29, 2016
