Physical Models Of Living Systems By Philip Nelson

Living systems are open self-organizing life forms that interact with their environment. These systems are

maintained by flows of information, energy and matter. Some scientists have proposed in the last few decades that a general living systems theory is required to explain the nature of life. Such a general theory, arising out of the ecological and biological sciences, attempts to map general principles for how all living systems work. Instead of examining phenomena by attempting to break thin
