To be effective, the automotive air conditioner must control four (4) conditions within the vehicle interior: It must cool the air The four major functions It must circulate the air It must purify the air It must dehumidify the air These functions are essential if passenger comfort is to be maintained when the ambient temperature and

humidity are high.

Automotive Air Conditioning Training Manual

Most central air conditioners are connected to a home's forced-air distribution system. Thus, the same motor, blower, and ductwork used for heating are used to distribute cool air from the air conditioning system. When a central air conditioner is operating, hot air inside the house flows to the furnace through the return-air duct. The hot air is moved by the blower across the cooled evaporator coil in the plenum and is then delivered through ducts to cool the house.
