A photovoltaic power station, also known as a solar park or solar farm, is a large-scale photovoltaic system (PV system) designed for the supply of merchant power into the electricity grid. They are differentiated from most building-mounted and other decentralised solar power applications because they supply power at the utility level, rather than to a local user or users.

A large-scale solar photovoltaic (PV) power plant may have hundreds of thousands or even millions of solar panels. Like rooftop solar, large-scale PV projects use photovoltaic cells arranged into panels. But while a rooftop system may consist of dozens of panels, a single large-scale project may have hundreds of thousands or even millions.

Large-scale solar (LSS) aims to produce 2.5 GW, which contributes to 10% of the nation's electricity demands. The LSS system is held back by the grid-scale integration, transmission, and distribution infrastructure. Thus, power system analysis is crucial to achieve optimization in LSS to power grid integration.
