It Hurts when I Poop!

A Story for Children who are Scared to Use the Potty

Ryan, remembering that it sometimes hurts when he goes to the bathroom, ends up with many stomach aches and is afraid to use the toilet, until he goes to the doctor and learns how to make his stools softer.

Colonic Motility

From Bench Side to Bedside *Biota Publishing*

Three distinct types of contractions perform colonic motility functions. Rhythmic phasic contractions (RPCs) cause slow net distal propulsion with extensive mixing/turning over.

Infrequently occurring giant migrating contractions (GMCs) produce mass movements. Tonic contractions aid RPCs in their motor function. The spatiotemporal patterns of these contractions differ markedly. The amplitude and distance of propagation of a GMC are several-fold larger than those of an RPC. The enteric neurons and smooth muscle cells are the core regulators of all three types of contractions. The regulation of contractions by these mechanisms is modifiable by extrinsic factors: CNS, autonomic neurons, hormones, inflammatory mediators, and stress mediators. Only the GMCs produce descending inhibition, which accommodates the large bolus being propelled without increasing muscle

tone. The strong compression of the colon wall generates afferent signals that are below nociceptive threshold in healthy subjects. However, these signals become nociceptive; if the amplitudes of GMCs increase, afferent nerves become hypersensitive, or descending inhibition is impaired. The GMCs also provide the force for rapid propulsion of feces and descending inhibition to relax the internal anal sphincter during defecation. The dysregulation of GMCs is a major factor in colonic motility disorders: irritable bowel syndrome (IBS), inflammatory bowel disease (IBD), and diverticular disease (DD). Frequent mass movements by GMCs cause diarrhea in diarrhea predominant IBS, IBD, and DD, while a decrease in the frequency of GMCs causes constipation.

The GMCs generate the afferent signals for intermittent short-lived episodes of abdominal cramping in these disorders. Epigenetic dysregulation due to adverse events in early life is one of the major factors in generating the symptoms of IBS in adulthood.

This oral history takes the reader behind the curtain for all the show's highlights, from its origins as Comedy Central's underdog late-night program to Trevor Noah's succession, rising from a scrappy jester in the 24-hour political news cycle to become part of the

beating heart of politics-a trusted source for not only comedy but also commentary, with a reputation for calling bullshit and an ability to effect real change in the world. For many children, however, these internal cues can be overwhelming and confusing, leading to both a frustrating and traumatic toileting experience. Liam Goes Poo in the Toilet illustrates the relationship between eating and excreting. It provides visual instructions on how to 'relax and push'. After much fanfare, Liam finally masters

going 'poo' in the toilet, and both he and Mum bask in the glory of a job well done.

Stool Withholding

What To Do When Your Child Won't Poop! (USA Edition) *Macnaughtan Books*

USA/Canada Edition Inspired by the author's experience of this issue with her own son, this easy-to-understand guide gives detailed advice on every aspect of stool withholding including soiling (encopresis), toilet training, laxative medication and constipation. Stool withholding is most common in two to four year olds but it can also affect school-age children. It is often triggered by an episode of painful constipation. The child then becomes so terrified of

experiencing this pain again that they hold on to their poop for days, even weeks, at a time. Just to add to the misery, stool withholding often causes children to soil their underwear. This bewildering problem can sometimes feel like a form of daily torture, not just for the child but for the whole family. Unless you've experienced this with your own child, it's difficult to imagine just how distressing it can be. After reading this, parents will have a straightforward plan of action, with lots of tips and strategies to try at home. The book also contains useful information about the laxative MiraLAX, with guidance on appropriate doses (and RestoraLAX doses for those in Canada). The advice given is backed up by research, as well as the experiences of the author and other

parents who have had to deal with this issue. Aimed primarily at parents, this guide should also be essential reading for healthcare professionals, teachers and anyone else who works with, or cares for, children. Stool withholding is still a widely misunderstood issue. If awareness and understanding of this subject is increased, many families could be spared this distressing problem. UK/Europe/Australia/NZ Edition also available on Amazon "Stool Withholding: What To Do When Your Child Won't Poop!" (with guidance on Movicol dosage). About the Author Sophia Ferguson has an Honours degree in Psychology, a Masters degree in Applied Social Research and a great interest in all things medical and psychological.
