Interpenetration Of Solids In Engineering

Interpenetration Of Solids By interpenetration is meant the intersection of two bodies of similar or different form, resulting in a regular or irregular figure, as the case may be. Fig. 86. Take a simple

case, namely, a cylinder penetrating a rectangular prism at an angle of 60 degrees.

When two solids Interpenetrate, a line of intersection is formed. It is sometimes necessary to know the exact shape of this line, usually so that an accurate development of either or both of the solids can be drawn. This chapter shows the lines of intersection formed when some of the simpler geometric solids interpenetrate

INTERPENETRATION OF SOLIDS. 1. A square prism of base 50 mm side and height 125 mm stands on the ground with its side of base inclined at an angle of 30° to VP. It is penetrated by a cylinder of diameter 50 mm and axis 125 mm long. The axis of the cylinder is parallel to both HP and VP and bisects the axis of the prism.

Technical Drawing - Interpenetration - Introduction. When two soids interpenetrate, (intersect), eachother a straight line or a curved line of interpenetration is formed. Whether the line is curved or straight depends on the shape of the solids. To find the lines of interpenetration we find points that both solids have in common and join them together.
