In my opinion, low-band VHF is what I would call a "technological cul-de-sac." It was a great technology in the early days of broadcasting when making power was an expensive proposition and generating RF at frequencies above 100 MHz was a challenge to do and keep stable, and receive antennas were mounted on the outside of homes high above the roof.

The most important thing to focus on is LOSS. It is LOSS that we are trying to avoid on VHF / UHF. The HF guys don't pay much attention to this, because coax loss is MUCH lower at HF than it is at VHF+. Many an HFer uses RG-213 coax, because it is "OK" at their low frequencies. RG-213 is practically useless at VHF+ frequencies, because there is too much loss (except for short jumpers).
