Configuration of the Snow Active Directory Discovery is straightforward. Once up and running, the service is fully automated and operates without any user interaction. The inventory of the Active Directory is executed according to the scheduling settings.

USER GUIDE - Snow Software

This part of the script sets up the XML writer to generate the file, then sets up the Active Directory credentials, builds the users elements and groups elements by calling the relevant functions, and finally sends the file to Interact as a POST request with the appropriate headers set.

Generating an XML file from Active Directory

Active Directory and LDAP can be used for both authentication and authorization (the authc and authz sections of the configuration, respectively).

Authentication checks whether the user has entered valid credentials.

Authorization retrieves any backend roles for the user. In most cases, you want to configure both authentication and authorization.
