Network infrastructure is a term used to describe the hardware equipment and software applications, used to help individuals and businesses leverage certain technology. It is very likely your business uses some degree of telecoms technology, whether that's phone lines and headsets, or computers, smart phones and the internet.

A Quick Guide to Network Infrastructure | PureComms

It is a global collection of networks, both big and small. These networks connect together in many different ways to form the single entity that we know as the Internet. In fact, the very name comes from this idea of interconnected networks. Since its beginning in 1969, the Internet has grown from four host computer systems to tens of millions.

How Internet Infrastructure Works | HowStuffWorks

Every computer that is connected to the Internet is part of a network, even the one in your home. For example, you may use a modem and dial a local number to connect to an Internet Service Provider (ISP). At work, you may be part of a local area network (LAN), but you most likely still connect to the Internet using an ISP that your company has contracted with.

The Internet: Computer Network Hierarchy | HowStuffWorks

The Internet backbone may be defined by the principal data routes between large, strategically interconnected computer networks and core routers of the Internet. These data routes are hosted by commercial, government, academic and other high-capacity network centers, as well as the Internet exchange points and network access points, that exchange Internet traffic between the countries, continents, and across the oceans. Internet service providers, often Tier 1 networks, participate in Internet backbone.

Internet backbone - Wikipedia
