Does the equation $(x^2 + y^2 = 1)$ represent a function with (x) as input and (y) as output? If so, express the relationship as a function $(y = f(x))$.
Solution. First we subtract (x^2) from both sides. $[y^2 = 1 - x^2]$
We now try to solve for (y) in this equation. $[y = \pm \sqrt{1 - x^2}]$

You give me negative 1 and I will map it to 3. Then they have if x is 2, then our value is negative 2. This is the point 2, negative 2, so that still seems consistent with being a function. If you pass me 2, I will map you or I will point you to negative 2. Seems fair enough. Let's see this next value here. This is the point 3 comma 2 right there.
