The Year Civilization Collapsed: Revised and Updated *Princeton University Press*

"In 1177 B.C., marauding groups known only as the "Sea Peoples" invaded Egypt. The pharaoh's army and navy managed to defeat them, but the victory so weakened Egypt that it soon slid into decline, as did most of the surrounding civilizations. After centuries of brilliance, the civilized world of the Bronze Age came to an abrupt and cataclysmic end. Kingdoms fell like dominoes over the course of just a few decades. No more Minoans or Mycenaeans. No more Trojans, Hittites, or Babylonians. The thriving economy and cultures of the late second millennium B.C., which had stretched from Greece to Egypt and Mesopotamia, suddenly ceased to exist, along with writing systems, technology, and monumental architecture. But the Sea Peoples alone could not have caused such widespread breakdown. How did it happen? In this major new account of the causes of this "First Dark Ages," Eric Cline tells the gripping story of how the end was brought about by multiple interconnected failures, ranging from invasion and revolt to earthquakes, drought, and the cutting of international trade routes. Bringing to life the vibrant multicultural world of these great

civilizations, he draws a sweeping panorama of the empires and globalized peoples of the Late Bronze Age and shows that it was their very interdependence that hastened their dramatic collapse and ushered in a dark age that lasted centuries. A compelling combination of narrative and the latest scholarship, 1177 B.C. sheds new light on the complex ties that gave rise to, and ultimately destroyed, the flourishing civilizations of the Late Bronze Age—and that set the stage for the emergence of classical Greece"--

The Trojan War: A Very Short Introduction *Oxford University Press*

This introduction considers whether the Trojan war actually took place and whether archaeologists have discovered the site of ancient Troy.

The End of the Bronze Age

Changes in Warfare and the Catastrophe ca. 1200 B.C. - Third Edition *Princeton University Press*

The Bronze Age came to a close early in the twelfth century b.c. with one of the worst calamities in history: over a period of several decades, destruction descended upon key cities throughout the Eastern Mediterranean, bringing to an end the Levantine, Hittite, Trojan, and Mycenaean kingdoms and plunging some lands into a dark age that would last more than four hundred years. In his attempt to account for this destruction, Robert Drews rejects the traditional explanations and proposes a military one instead.

Digging Up Armageddon

The Search for the Lost City of Solomon *Princeton University Press*

"In 1925 a team of archaeologists was sent by famed archaeologist James Henry Breasted, the Director of the Oriental Institute of the University of Chicago, to search for the city that King Solomon built in the tenth century BCE. These excavations are rightfully famous for the light they shed on one of the most important cities in biblical times: the ancient city of Megiddo, in Israel, the site of Armageddon. The books and articles that the original participants published are still used, and debated, by archaeologists working in the region today. However, these scholarly publications provide only a small window into the daily activities of the team members and the stories behind their amazing discoveries. Using a treasure trove of other writing - including more than three decades' worth of letters, cablegrams, cards, and diaries, archaeologist and historian Eric Cline, who spent twenty years digging at Megiddo himself, brings the Chicago excavators and their discoveries to life situating them against the backdrop of the Great Depression in the United States as well as the growing troubles and tensions in British Mandate Palestine. Their story, as recounted by Cline, often reads more like melodrama than dry archaeological report and provides a unique a glimpse of

the internal workings of a dig in the early years of biblical archaeology. In the course of telling their story, Cline gives readers the full picture of an archaeological site from its first discoveries to its most recent excavations placing it all in the larger scheme of the rise and fall of civilizations, from the Neolithic Revolution through the Romans"--

Three Stones Make a Wall

The Story of Archaeology *Princeton University Press*

In 1922, Howard Carter peered into Tutankhamun's tomb for the first time, the only light coming from the candle in his outstretched hand. Urged to tell what he was seeing through the small opening he had cut in the door to the tomb, the Egyptologist famously replied, "I see wonderful things." Carter's fabulous discovery is just one of the many spellbinding stories told in *Three Stones Make a Wall*. Written by Eric Cline, an archaeologist with more than thirty seasons of excavation experience, this book traces the history of archaeology from an amateur pursuit to the cutting-edge science it is today by taking the reader on a tour of major archaeological sites and discoveries. Along the way, it addresses the questions archaeologists are asked most often: How do you know where to dig? How are excavations actually done? How do you know how old something is? Who gets to keep what is found? Taking readers from the pioneering digs of the eighteenth century to today's exciting new discoveries, *Three Stones Make a Wall* is a lively and essential introduction to the story of archaeology.

The Oxford Handbook of the Bronze Age Aegean *Oxford University Press*

The *Oxford Handbook of the Bronze Age Aegean* provides a comprehensive overview of our current understanding of the Bronze Age Aegean (ca. 3000-1000 BC) and describes the most important debates and discussions within the discipline. Presented in four separate sections within the Handbook, the sixty-six commissioned articles cover topics ranging from chronological and geographical to thematic to site-specific. The volume will be indispensable for scholars and advanced students alike.

Rome Is Burning

Nero and the Fire That Ended a Dynasty *Princeton University Press*

Drawing on new archaeological evidence, an authoritative history of Rome's Great Fire—and how it inflicted lasting harm on the Roman Empire. According to legend, the Roman emperor Nero set fire to his majestic imperial capital on the night of July 19, AD 64 and fiddled while the city burned. It's a story that has been told for more than two millennia—and it's likely that almost none of it is true. In *Rome Is Burning*, distinguished Roman historian Anthony Barrett sets the record straight, providing a comprehensive and authoritative account of the Great Fire of Rome, its immediate aftermath, and its damaging longterm consequences for the Roman world. Drawing on remarkable new archaeological discoveries and sifting through all the literary evidence, he tells what is known about what actually happened—and argues that the disaster was a turning point in Roman history, one

that ultimately led to the fall of Nero and the end of the dynasty that began with Julius Caesar. *Rome Is Burning* tells how the fire destroyed much of the city and threw the population into panic. It describes how it also destroyed Nero's golden image and provoked a financial crisis and currency devaluation that made a permanent impact on the Roman economy. Most importantly, the book surveys, and includes many photographs of, recent archaeological evidence that shows visible traces of the fire's destruction. Finally, the book describes the fire's continuing afterlife in literature, opera, ballet, and film. A richly detailed and scrupulously factual narrative of an event that has always been shrouded in myth, *Rome Is Burning* promises to become the standard account of the Great Fire of Rome for our time.

Brotherhood of Kings

How International Relations Shaped the Ancient Near East *Oxford University Press*

Amanda Podany here takes readers on a vivid tour through a thousand years of ancient Near Eastern history, from 2300 to 1300 BCE, paying particular attention to the lively interactions that took place between the great kings of the day. Allowing them to speak in their own words, Podany reveals how these leaders and their ambassadors devised a remarkably sophisticated system of diplomacy and trade. What the kings forged, as they saw it, was a relationship of friends-brothers-across hundreds of miles. Over centuries they worked out ways for their ambassadors to travel safely to one another's capitals, they created formal rules of interaction and ways to work out disagreements, they agreed to treaties and abided by them, and their efforts had paid off with the exchange of luxury goods that each country wanted from the other. Tied to one another through

peace treaties and powerful obligations, they were also often bound together as in-laws, as a result of marrying one another's daughters. These rulers had almost never met one another in person, but they felt a strong connection--a real brotherhood--which gradually made wars between them less common. Indeed, any one of the great powers of the time could have tried to take over the others through warfare, but diplomacy usually prevailed and provided a respite from bloodshed. Instead of fighting, the kings learned from one another, and cooperated in peace. A remarkable account of a pivotal moment in world history--the establishment of international diplomacy thousands of years before the United Nations--*Brotherhood of Kings* offers a vibrantly written history of the region often known as the "cradle of civilization."

Sea Peoples of the Bronze Age Mediterranean c.1400 BC-1000 BC *Bloomsbury Publishing*

This title features the latest historical and archaeological research into the mysterious and powerful confederations of raiders who troubled the Eastern Mediterranean in the last half of the Bronze Age. Research into the origins of the so-called Shardana, Shekelesh, Danuna, Lukka, Peleset and other peoples is a detective 'work in progress'. However, it is known that they both provided the Egyptian pharaohs with mercenaries, and were listed among Egypt's enemies and invaders. They contributed to the collapse of several civilizations through their dreaded piracy and raids, and their waves of attacks were followed by major migrations that changed the face of this region, from modern Libya and Cyprus to the Aegean, mainland Greece, Lebanon and Anatolian Turkey. Drawing on carved inscriptions and papyrus documents – mainly from Egypt – dating from the 15th-11th centuries BC, as well as carved reliefs of the Medinet Habu, this title reconstructs the formidable appearance and even the tactics of the famous 'Sea Peoples'.

The Collapse of Complex Societies *Cambridge University Press*

Twenty-four examples of societal collapse help develop a new theory to account for their breakdown. Detailed studies of the Roman, Mayan and Cacoan collapses clarify the processes of disintegration.

Jerusalem Besieged

From Ancient Canaan to Modern Israel *University of Michigan Press*

"Jerusalem Besieged is a fascinating account of how and why a baffling array of peoples, ideologies, and religions have fought for some four thousand years over a city without either great wealth, size, or strategic importance. Cline guides us through the baffling, but always bloody, array of Jewish, Roman, Moslem, Crusader, Ottoman, Western, Arab, and Israeli fights for possession of such a symbolic prize in a manner that is both scholarly and engaging." -Victor Davis Hanson, Stanford University; author of *The Other Greeks* and *Carnage and Culture* "A beautifully lucid presentation of four thousand years of history in a single volume. Cline writes primarily as an archaeologist-avoiding polemic and offering evidence for any religious claims-yet he has also incorporated much journalistic material into this study. Jerusalem Besieged will enlighten anyone interested in the history of military conflict in and around Jerusalem." -Col. Rose Mary Sheldon, Virginia Military Institute "This

groundbreaking study offers a fascinating synthesis of Jerusalem's military history from its first occupation into the modern era. Cline amply deploys primary source material to investigate assaults on Jerusalem of every sort, starting at the dawn of recorded history. Jerusalem Besieged is invaluable for framing the contemporary situation in the Middle East in the context of a very long and pertinent history." -Baruch Halpern, Pennsylvania State University A sweeping history of four thousand years of struggle for control of one city "[An] absorbing account of archaeological history, from the ancient Israelites' first conquest to today's second intifada. Cline clearly lays out the fascinating history behind the conflicts." -USA Today "A pleasure to read, this work makes this important but complicated subject fascinating." -Jewish Book World "Jerusalem Besieged is a fascinating account of how and why a baffling array of peoples, ideologies, and religions have fought for some four thousand years over a city without either great wealth, size, or strategic importance. Cline guides us through the baffling, but always bloody, array of Jewish, Roman, Moslem, Crusader, Ottoman, Western, Arab, and Israeli fights for possession of such a symbolic prize in a manner that is both scholarly and engaging." -Victor Davis Hanson, Stanford University; author of *The Other Greeks* and *Carnage and Culture*

From Eden to Exile

Unraveling Mysteries of the Bible *National Geographic Books*

Eric H. Cline uses the tools of his trade to examine some of the most puzzling mysteries from the Hebrew Bible and, in the process, to narrate the history of ancient Israel. Combining the academic rigor that has won the respect of his peers with an accessible style that has made him a favorite with readers and students alike, he lays out each mystery, evaluates all available evidence—from established fact to arguable assumption to far-fetched leap of faith—and proposes an explanation that reconciles Scripture, science, and history. Numerous amateur archaeologists have sought some trace of Noah's Ark to meet only with failure. But, though no serious scholar would undertake such a literal search, many agree that the Flood was no myth but the cultural memory of a real, catastrophic inundation, retold and reshaped over countless generations. Likewise, some experts suggest that Joshua's storied victory at Jericho is the distant echo of an earthquake instead of Israel's sacred trumpets—a fascinating, geologically plausible theory that remains unproven despite the best efforts of scientific research. Cline places these and other Biblical stories in solid archaeological and historical context, debunks more than a few lunatic-fringe fantasies, and reserves judgment on ideas that cannot yet be confirmed or denied. Along the way, our most informed understanding of ancient Israel comes alive with dramatic but accurate detail in this groundbreaking, engrossing, entertaining book by one of the rising stars in the field.

Digging Deeper

How Archaeology Works *Princeton University Press*

From the bestselling author of 1177 B.C., an accessible primer to the archaeologist's craft An archaeologist with more than thirty seasons of excavation experience, Eric H. Cline has conducted

fieldwork around the world, from Greece and Crete to Egypt, Israel, and Jordan. In *Digging Deeper*, Cline answers the questions archaeologists are most frequently asked, such as: How do you know where to dig? How are excavations actually done? How do you know how old something is? Who gets to keep what is found? How do you know what people from the past ate, wore, and looked like? Adapted from Cline's acclaimed book *Three Stones Make a Wall*, this lively little volume is brimming with insights and practical advice about how archaeology really works. Whether you are an armchair archaeologist or embarking on your first excavation, *Digging Deeper* is an essential primer on the art of the dig.

The World of The Neo-Hittite Kingdoms

A Political and Military History *Oxford University Press*

Bryce's volume gives an account of the military and political history of the Neo-Hittite kingdoms, moving beyond the Neo-Hittites themselves to the broader Near Eastern world and the states which dominated it during the Iron Age.

Collapse and Transformation

The Late Bronze Age to Early Iron Age in the Aegean *Oxbow Books*

The years c. 1250 to 1150 BC in Greece and the Aegean are often characterised as a time of crisis and collapse. A critical period in the long history of the region and its people and culture, they witnessed the end of the Mycenaean kingdoms, with their palaces and Linear B records, and, through the Postpalatial period, the transition into the Early Iron Age. But, on closer examination, it has become increasingly clear that the period as a whole, across the region, defies simple characterisation – there was success and splendour, resilience and continuity, and novelty and innovation, actively driven by the people of these lands through this transformative century. The story of the Aegean at this time has frequently been incorporated into narratives focused on the wider eastern Mediterranean, and most infamously the ‘Sea Peoples’ of the Egyptian texts. In twenty-five chapters written by 25 specialists, *Collapse and Transformation* instead offers a tight focus on the Aegean itself, providing an up-to date picture of the archaeology ‘before’ and ‘after’ ‘the collapse’ of c. 1200 BC. It will be essential reading for students and scholars of the Aegean and eastern Mediterranean regions, as well as providing data and a range of interpretations to those studying collapse and resilience more widely and engaging in comparative studies. Introductory chapters discuss notions of collapse, and provide overviews of the Minoan and Mycenaean collapses. These are followed by twelve chapters, which review the evidence from the major regions of the Aegean, including the Argolid, Messenia, and Boeotia, Crete, and the Aegean islands. Six chapters then address key themes: the economy, funerary practices, the Mycenaean pottery of the mainland and the wider Aegean and eastern Mediterranean region, religion, and the extent to which later Greek myth can be drawn upon as evidence or taken to reflect any historical reality. The final four chapters provide a wider context for the Aegean story, surveying the eastern Mediterranean, including Cyprus and the Levant, and the themes of subsistence and warfare.

Megadrought and Collapse

From Early Agriculture to Angkor *Oxford University Press*

Megadrought and Collapse is the first book to treat in one volume the current paleoclimatic and archaeological evidence of megadrought events coincident with major historical examples of societal collapse. Previous works have offered multi-causal explanations for climate change, from overpopulation, overexploitation of resources, and warfare to poor leadership and failure to adapt to environmental changes. In earlier synthetic studies of major instances of collapse, the archaeological record has often not been considered. Included in this volume are nine case studies that span the globe and stretch over fourteen thousand years, from the paleolithic hunter-gatherer collapse of the 12th millennium BC to the 15th century AD fall of the Khmer capital at Angkor. Together, the studies constitute a primary sourcebook in which principal investigators in archaeology and paleoclimatology present their original research. Each case study juxtaposes the latest paleoclimatic evidence of a megadrought (so-called for its severity and its decades to centuries-long duration) with available archaeological records of synchronous societal collapse. The megadrought data are derived from all five archival paleoclimate proxy sources: lake, marine, and glacial cores, speleothems (cave stalagmites), and tree rings. The archaeological records in each case are the most recently retrieved. The editor derives two arguments from the discussions in the volume: (1) Societal collapse would not have occurred without megadrought. Attendant social disruptions may have been present in some instances. Nonetheless, megadrought rendered agriculture-based societies unsustainable in different regions, periods, and levels of social complexity, from simple foraging to vast empires. (2) A set of adaptive responses can be observed across the nine cases: adaptive collapse in the face of insurmountable megadrought, region-wide and settlement abandonment, and habitat tracking to sustainable agricultural environments. The evidence points to a paradigm shift: the insertion of another major force, natural climate variability-megadrought-into the global historical record.

Collapse

How Societies Choose to Fail or Survive *Penguin UK*

From the author of *Guns, Germs and Steel*, Jared Diamond's *Collapse: How Societies Choose to Fail or Survive* is a visionary study of the mysterious downfall of past civilizations. Now in a revised edition with a new afterword, Jared Diamond's *Collapse* uncovers the secret behind why some societies flourish, while others founder - and what this means for our future. What happened to the people who made the forlorn long-abandoned statues of Easter Island? What happened to the architects of the crumbling Maya pyramids? Will we go the same way, our skyscrapers one day standing derelict and overgrown like the temples at Angkor Wat? Bringing together new evidence from a startling range of sources and piecing together the myriad influences, from climate to culture, that make societies self-destruct, Jared Diamond's *Collapse* also shows how - unlike our ancestors - we can benefit from our knowledge of the past and learn to be survivors. 'A grand sweep from a master storyteller of the human race' - Daily Mail 'Riveting, superb, terrifying' - Observer

'Gripping ... the book fulfils its huge ambition, and Diamond is the only man who could have written it' - Economist
 'This book shines like all Diamond's work' - Sunday Times

Archaeology from Space

How the Future Shapes Our Past *Henry Holt and Company*

National Geographic Explorer and TED Prize-winner Dr. Sarah Parcak welcomes you to the exciting new world of space archaeology, a growing field that is sparking extraordinary discoveries from ancient civilizations across the globe. In *Archaeology from Space*, Sarah Parcak shows the evolution, major discoveries, and future potential of the young field of satellite archaeology. From surprise advancements after the declassification of spy photography, to a new map of the mythical Egyptian city of Tanis, she shares her field's biggest discoveries, revealing why space archaeology is not only exciting, but urgently essential to the preservation of the world's ancient treasures. Parcak has worked in twelve countries and four continents, using multispectral and high-resolution satellite imagery to identify thousands of previously unknown settlements, roads, fortresses, palaces, tombs, and even potential pyramids. From there, her stories take us back in time and across borders, into the day-to-day lives of ancient humans whose traits and genes we share. And she shows us that if we heed the lessons of the past, we can shape a vibrant future. Includes Illustrations

The Year Civilization Collapsed

Babylon

Mesopotamia and the Birth of Civilization *Macmillan*

Civilization was born eight thousand years ago, between the floodplains of the Tigris and Euphrates rivers, when migrants from the surrounding mountains and deserts began to create increasingly sophisticated urban societies. In the cities that they built, half of human history took place. In *Babylon*, Paul Kriwaczek tells the story of Mesopotamia from the earliest settlements seven thousand years ago to the eclipse of Babylon in the sixth century BCE. Bringing the people of this land to life in vibrant detail, the author chronicles the rise and fall of power during this period and explores the political and social systems, as well as the technical and cultural innovations, which made this land extraordinary. At the heart of this book is the story of Babylon, which rose to prominence under the Amorite king Hammurabi from about 1800 BCE. Even as Babylon's fortunes waxed and waned, it never lost its allure as the ancient world's greatest city. Engaging and compelling, *Babylon* reveals the splendor of the ancient world that laid the foundation for civilization itself.

Forgotten Peoples of the Ancient World *Thames & Hudson*

A chronicle of forty forgotten ancient civilizations which highlights the important contributions that

each has made to modern society. The ancient world of the Mediterranean and the Near East saw the birth and collapse of great civilizations. While several of these are well known, for all those that have been recorded, many have been unjustly forgotten. Our history is overflowing with different cultures that have all evolved over time, sometimes dissolving or reforming, though ultimately shaping the way we continue to live. But for every culture that has been remembered, what have we forgotten? This thorough guide explores those civilizations that have faded from the pages of our textbooks but played a significant role in the development of modern society. *Forgotten Peoples of the Ancient World* covers the Hyksos to the Hephthalites and everyone in between, providing a unique overview of humanity's history from approximately 3000 BCE-550 CE. A wide range of illustrated artifacts and artworks, as well as specially drawn maps, help to tell the stories of forty lost peoples and allow readers to take a direct look into the past. Each entry exposes a diverse culture, highlighting their important contributions and committing their achievements to paper. *Forgotten Peoples of the Ancient World* is an immersive, thought-provoking, and entertaining book for anyone interested in ancient history.

The End Is Always Near

Apocalyptic Moments, from the Bronze Age Collapse to Nuclear Near Misses *HarperCollins*

Now a New York Times Bestseller. The creator of the wildly popular award-winning podcast *Hardcore History* looks at some of the apocalyptic moments from the past as a way to frame the challenges of the future. Do tough times create tougher people? Can humanity handle the power of its weapons without destroying itself? Will human technology or capabilities ever peak or regress? No one knows the answers to such questions, but no one asks them in a more interesting way than Dan Carlin. In *The End is Always Near*, Dan Carlin looks at questions and historical events that force us to consider what sounds like fantasy; that we might suffer the same fate that all previous eras did. Will our world ever become a ruin for future archaeologists to dig up and explore? The questions themselves are both philosophical and like something out of *The Twilight Zone*. Combining his trademark mix of storytelling, history and weirdness Dan Carlin connects the past and future in fascinating and colorful ways. At the same time the questions he asks us to consider involve the most important issue imaginable: human survival. From the collapse of the Bronze Age to the challenges of the nuclear era the issue has hung over humanity like a persistent Sword of Damocles. Inspired by his podcast, *The End is Always Near* challenges the way we look at the past and ourselves. In this absorbing compendium, Carlin embarks on a whole new set of stories and major cliffhangers that will keep readers enthralled. Idiosyncratic and erudite, offbeat yet profound, *The End is Always Near* examines issues that are rarely presented, and makes the past immediately relevant to our very turbulent present.

The Sea Peoples

The Mysterious Nomads Who Ushered in the Iron Age

*Includes pictures *Includes ancient accounts of the Sea Peoples *Discusses theories about the Sea

Peoples' origins *Includes a bibliography for further reading "The [Egyptian] charioteers were warriors...and all good officers, ready of hand. Their horses were quivering in their every limb, ready to crush the [foreign] countries under their feet...Those who reached my boundary, their seed is not; their heart and soul are finished forever and ever." - An inscription made during the reign of Ramesses III When scholars look at the passage of history, certain epochs and transitions to new periods tend to stand out. The transition from the early modern to the Industrial Age in the late 18th century and the collapse of the Roman Empire are two of the more well known, but the transition from the Bronze to the Iron Age during the late 13th and early 12th centuries BCE arguably changed the structure and course of world history more fundamentally than any period before or since. During this period, numerous wealthy and enduring kingdoms of the eastern Mediterranean Sea region collapsed, and new ones rose in their places. At the center of this period of turmoil was a group of people known today as the Sea Peoples, the English translation of the name given to them by the Egyptians. Despite their prominent role in history, however, the Sea Peoples remain as mysterious as they were influential; while the Egyptians documented their presence and the wars against them, it has never been clear exactly where the Sea Peoples originated from, or what compelled them to invade various parts of the region with massive numbers. Whatever the reason, the Sea Peoples posed an existential threat to the people already living in the region, as noted by an Egyptian inscription: "The foreign countries (i.e. Sea Peoples) made a conspiracy in their islands. All at once the lands were removed and scattered in the fray. No land could stand before their arms: from Hatti, Qode, Carchemish, Arzawa and Alashiya on, being cut off (i.e. destroyed) at one time. A camp was set up in Amurru. They desolated its people, and its land was like that which has never come into being. They were coming forward toward Egypt, while the flame was prepared before them. Their confederation was the Peleset, Tjeker, Shekelesh, Denyen and Weshesh, lands united. They laid their hands upon the land as far as the circuit of the earth, their hearts confident and trusting: 'Our plans will succeed!'" As with any historical matter from the ancient world, the sources can be a problem. The ancient Egyptians recorded their interactions with the Sea Peoples in both written texts and in pictorial reliefs and thus provide the most complete contemporary description of them, but the nature of ancient Egyptian historiography was quite different than the modern concept, so the sources cannot be considered entirely reliable. Later Greek sources, both historiographical and mythological, can help fill in some more details, but those sources are suspect because they were written several centuries after the emergence of the Sea Peoples. Modern archaeology is beneficial in determining how people lived and possibly where they moved, but there are also problems when one relies too much on archaeological data because the dating of material culture is not an exact science. Finally, linguistic evidence is often employed to determine the geographic origins and eventual landing points of many of the Sea Peoples, but confusion often arises if a group's demonym refers specifically to their place of origin or final home. Naturally, the mystery surrounding the Sea Peoples has led to all kinds of theories aiming to identify them. While plenty of theories are plausible, there are other fanciful theories that have attempted to associate the Sea Peoples with the Atlantic Ocean and even Troy.

The Rise of Coptic

Egyptian Versus Greek in Late Antiquity *Princeton University Press*

Coptic emerged as the written form of the Egyptian language in the third century, when Greek was still the official language in Egypt. By the time of the Arab conquest of Egypt in 641, Coptic had almost achieved official status, but only after an unusually prolonged period of stagnation. Jean-Luc Fournet traces this complex history, showing how the rise of Coptic took place amid profound cultural, religious, and political changes in late antiquity. For some three hundred years after its introduction into the written culture of Egypt, Coptic was limited to biblical translation and private and monastic correspondence, while Greek retained its monopoly on administrative, legal, and literary writing. This changed during the sixth century, when Coptic began to penetrate domains that were once closed to it, such as literature, liturgy, regulated transactions between individuals, and communications between the state and its subjects. Fournet examines the reasons for Coptic's late development as a competing language—which was unlike what happened with other vernacular languages in Near Eastern Greek-speaking societies—and explains why Coptic eventually succeeded in being recognized with Greek as an official language. Incisively written and rich with insights, *The Rise of Coptic* draws on a wealth of archival evidence to shed new light on the role of monasticism in the growing use of Coptic before the Arab conquest.

Sailing the Wine-dark Sea

International Trade and the Late Bronze Age Aegean *British Archaeological Reports Limited*

This book looks at the 942 artifacts of foreign origin - from Anatolia, Cyprus, Egypt, Italy, Mesopotamia, and Syro-Palestine - which have been found in the late Bronze Age Aegean area. These objects represent the only group of material in the LBA Aegean that has not disintegrated or disappeared, and as such are unique in providing information about the complex trade networks of the period. Beginning with a discussion of trade and transactions in the LBA, Cline then examines the literary and pictorial evidence for international trade and presents a full catalogue of objects with description, origin, and bibliographic references. Three appendices include information on raw materials, problematic objects, and disputed contexts. This information provides a useful database for those studying Aegean and Mediterranean trade.

The Hattian and Hittite Civilizations

Ancient Empires

From Mesopotamia to the Rise of Islam *Cambridge University Press*

"Ancient Empires is a relatively brief yet comprehensive and even-handed overview of the ancient Near East, the Mediterranean, and Europe, including the Greco-Roman world, Late Antiquity, and the early Muslim period. The book emphasizes the central, if problematic, connection between political and ideological power in both empire-formation and resistance. By defining the ancient world as a period stretching from the Bronze Age into the early Muslim world, it is broader in scope than competing books; yet at the same time its tight thematic concentration keeps the narrative

engagingly focused"--

The Storm Before the Storm

The Beginning of the End of the Roman Republic *PublicAffairs*

The creator of the award-winning podcast series *The History of Rome and Revolutions* brings to life the bloody battles, political machinations, and human drama that set the stage for the fall of the Roman Republic. The Roman Republic was one of the most remarkable achievements in the history of civilization. Beginning as a small city-state in central Italy, Rome gradually expanded into a wider world filled with petty tyrants, barbarian chieftains, and despotic kings. Through the centuries, Rome's model of cooperative and participatory government remained remarkably durable and unmatched in the history of the ancient world. In 146 BC, Rome finally emerged as the strongest power in the Mediterranean. But the very success of the Republic proved to be its undoing. The republican system was unable to cope with the vast empire Rome now ruled: rising economic inequality disrupted traditional ways of life, endemic social and ethnic prejudice led to clashes over citizenship and voting rights, and rampant corruption and ruthless ambition sparked violent political clashes that cracked the once indestructible foundations of the Republic. Chronicling the years 146-78 BC, *The Storm Before the Storm* dives headlong into the first generation to face this treacherous new political environment. Abandoning the ancient principles of their forbearers, men like Marius, Sulla, and the Gracchi brothers set dangerous new precedents that would start the Republic on the road to destruction and provide a stark warning about what can happen to a civilization that has lost its way.

A Little History of Archaeology *Yale University Press*

The thrilling history of archaeological adventure, with tales of danger, debate, audacious explorers, and astonishing discoveries around the globe. What is archaeology? The word may bring to mind images of golden pharaohs and lost civilizations, or Neanderthal skulls and Ice Age cave art. Archaeology is all of these, but also far more: the only science to encompass the entire span of human history—more than three million years! This *Little History* tells the riveting stories of some of the great archaeologists and their amazing discoveries around the globe: ancient Egyptian tombs, Mayan ruins, the first colonial settlements at Jamestown, mysterious Stonehenge, the incredibly preserved Pompeii, and many, many more. In forty brief, exciting chapters, the book recounts archaeology's development from its eighteenth-century origins to its twenty-first-century technological advances, including remote sensing capabilities and satellite imagery techniques that have revolutionized the field. Shining light on the most intriguing events in the history of the field, this absolutely up-to-date book illuminates archaeology's controversies, discoveries, heroes and scoundrels, global sites, and newest methods for curious readers of every age.

The Routledge Handbook of Disaster Risk Reduction Including Climate Change Adaptation *Routledge*

The *Routledge Handbook of Disaster Risk Reduction Including Climate Change Adaptation* aims to

provide an overview and critique of the current state of knowledge, policy, and practice, encouraging engagement, and reflection on bringing the two sectors together. This long-awaited and welcomed volume makes a compelling case that a common research agenda and a series of practical policies and policy recommendations can and should be put in place. Over 40 contributions explore DRR including CCA in five parts. The first part presents and interrogates much of the typical vocabulary seen in DRR including CCA, not only pointing out the useful and not-so-useful dimensions, but also providing alternatives and positive examples. The second part explains how to move forward creating and supporting positive crossovers and connections, while the third one explores some aspects of multi-dimensional approaches to knowing and understanding. The fourth part argues for a balanced approach to governance, taking both governmental and non-governmental governance, as well as different scales of governance, into consideration. The final part of the Handbook emphasises DRR including CCA as an investment, rather than a cost, and connects its further implementation with livelihoods of people around the world. This handbook highlights the connections amongst the processes of dealing with disasters and dealing with climate change. It demonstrates how little climate change brings which is new and emphasises the strengths of placing climate change within wider contexts in order to draw on all our strengths while overcoming limitations with specialities. It will prove to be a valuable guide for graduate and advanced undergraduate students, academics, policy makers, and practitioners with an interest in disaster risk reduction and climate change.

Masada

From Jewish Revolt to Modern Myth *Princeton University Press*

The dramatic story of the last stand of a group of Jewish rebels who held out against the Roman Empire, as revealed by the archaeology of its famous site. Two thousand years ago, 967 Jewish men, women, and children—the last holdouts of the revolt against Rome following the fall of Jerusalem and the destruction of the Second Temple—reportedly took their own lives rather than surrender to the Roman army. This dramatic event, which took place on top of Masada, a barren and windswept mountain overlooking the Dead Sea, spawned a powerful story of Jewish resistance that came to symbolize the embattled modern State of Israel. Incorporating the latest findings, Jodi Magness, an archaeologist who has excavated at Masada, explains what happened there—and what it has come to mean since. Featuring numerous illustrations, this is an engaging exploration of an ancient story that continues to grip the imagination today.

A Thousand Small Sanities

The Moral Adventure of Liberalism *Basic Books*

A stirring defense of liberalism against the dogmatism of our time from an award-winning and New York Times bestselling author. Not since the early twentieth century has liberalism, and liberals, been under such relentless attack, from both right and left. The crisis of democracy in our era has produced a crisis of faith in liberal institutions and, even worse, in liberal thought. *A Thousand Small*

Sanities is a manifesto rooted in the lives of people who invented and extended the liberal tradition. Taking us from Montaigne to Mill, and from Middlemarch to the civil rights movement, Adam Gopnik argues that liberalism is not a form of centrism, nor simply another word for free markets, nor merely a term denoting a set of rights. It is something far more ambitious: the search for radical change by humane measures. Gopnik shows us why liberalism is one of the great moral adventures in human history -- and why, in an age of autocracy, our lives may depend on its continuation.

Understanding Collapse *Cambridge University Press*

In this lively survey, Guy D. Middleton critically examines our ideas about collapse - how we explain it and how we have constructed potentially misleading myths around collapses - showing how and why collapse of societies was a much more complex phenomenon than is often admitted.

After the Ice

A Global Human History, 20,000-5000 BC *Harvard University Press*

Brings to life fifteen thousand years of human history in a study that follows an imaginary modern traveler who visits and observes prehistoric communities and landscapes that laid the foundations of the modern world.

A History of Ancient Greece

Frankenstein: Lost Souls

Why Did Ancient Civilizations Fail? *Routledge*

Ideas abound as to why certain complex societies collapsed in the past, including environmental change, subsistence failure, fluctuating social structure and lack of adaptability. *Why Did Ancient Civilizations Fail?* evaluates the current theories in this important topic and discusses why they offer only partial explanations of the failure of past civilizations. This engaging book offers a new theory of

collapse, that of social hubris. Through an examination of Mesopotamian, Egyptian, Roman, Maya, Inca, and Aztec societies, Johnson persuasively argues that hubris blinded many ancient peoples to evidence that would have allowed them to adapt, and he further considers how this has implications for contemporary societies. Comprehensive and well-written, this volume serves as an ideal text for undergraduate courses on ancient complex societies, as well as appealing to the scholar interested in societal collapse.

Why the West Rules - For Now

The Patterns of History, and What They Reveal About the Future *McClelland & Stewart*

Why does the West rule? In this magnum opus, eminent Stanford polymath Ian Morris answers this provocative question, drawing on 50,000 years of history, archeology, and the methods of social science, to make sense of when, how, and why the paths of development differed in the East and West — and what this portends for the 21st century. There are two broad schools of thought on why the West rules. Proponents of "Long-Term Lock-In" theories such as Jared Diamond suggest that from time immemorial, some critical factor — geography, climate, or culture perhaps — made East and West unalterably different, and determined that the industrial revolution would happen in the West and push it further ahead of the East. But the East led the West between 500 and 1600, so this development can't have been inevitable; and so proponents of "Short-Term Accident" theories argue that Western rule was a temporary aberration that is now coming to an end, with Japan, China, and India resuming their rightful places on the world stage. However, as the West led for 9,000 of the previous 10,000 years, it wasn't just a temporary aberration. So, if we want to know why the West rules, we need a whole new theory. Ian Morris, boldly entering the turf of Jared Diamond and Niall Ferguson, provides the broader approach that is necessary, combining the textual historian's focus on context, the anthropological archaeologist's awareness of the deep past, and the social scientist's comparative methods to make sense of the past, present, and future — in a way no one has ever done before.
