Spinors In Springer

Starting from an
 abstract complex 2-
 dimensional vector
 space with a fixed
 alternating tensor,
 there is constructed
 what is called a spinor
 space. This spinor
 space, it turns out, is
 intimately connected
 to what is known as a
 Lorentz vector space -
 a 4-dimensional vector
 space endowed with a
 metric of Lorentz
 signature.

Spinors In Springer

Spinors in Four-Dimensional Spaces is aimed at graduate students and researchers in mathematical and theoretical physics interested in the applications of the two-component spinor formalism in any four-dimensional vector space or Riemannian manifold with a definite or indefinite metric tensor. This systematic and self-contained book is suitable as a seminar text, a reference book, and a self-study guide.

Spinors in Four-Dimensional Spaces - Springer

The theory of spinors and the methods of the tensor representation of spinors and spinor equations are thoroughly expounded in four-dimensional and three-dimensional spaces. Very useful and important relations are derived that express the derivatives of the spinor fields in terms of the derivatives of various tensor fields.

Introduction. Invented by Dirac in creating his relativistic quantum theory of the electron, spinors are important in quantum theory, relativity, nuclear physics, atomic and molecular physics, and condensed matter physics. Essentially, they are the mathematical entities that correspond to electrons in the same way that ordinary wave functions correspond to classical particles (including photons).

There are many stars that are rotating spheroids in the

Universe, and studying them is of very important significance. Since the times of Newton, many astronomers and physicists have researched gravitational properties of stars by considering the moment equations derived from Eulerian hydrodynamic equations. In this paper we study the scattering of spinors of the Dirac equation, and in ...

In higher dimensions, pure spinors introduce natural nonlinearities and lead to topologically nontrivial configurations. It is shown how the constraint defining pure spinors may induce a 'mass term' in the Weyl equation for such spinors in a space of signature (3, 4). This

A bstract. We study fermionic bulk fields in the dS/CFT dualities relating $(\mathcal{N}) = 2$ supersymmetric Euclidean vector models with reversed spin-statistics in three dimensions to supersymmetric Vasiliev theories in four-dimensional de Sitter space. These dualities specify the Hartle-Hawking wave function in terms of the partition function of deformations of the vector models.
