Circuit Modeling For Electromagnetic Compatibility

Circuit modeling can be used to simulate the electromagnetic coupling mechanism of each critical link, allowing its performance to be analyzed and compared with the formal requirements. Bench testing during the development of any product will allow any interference problem to be identified and corrected, long before the manufactured unit is subjected to formal testing.

Preface of Modeling and Design of Electromagnetic Compatibility. A high-speed circuit is the base of contemporary information and communication technology (ICT) and consumer electronics. Our modern life is heavily dependent on the functioning of high-speed circuits developed for various purposes. Therefore, the electromagnetic compatibility (EMC) among various circuits becomes very important.

Partial element equivalent circuit method is partial inductance calculation used for interconnect problems from early 1970s which is used for numerical modeling of electromagnetic properties. The transition from a design tool to the full wave method involves the capacitance representation, the inclusion of time retardation and the dielectric formulation. Using the PEEC method, the problem will be transferred from the electromagnetic domain to the circuit domain where conventional SPICE-like circ
